Industrial communication networks - Installation of communication networks in industrial premises

Táto norma obsahuje anglickú verziu európskej normy.
This standard includes the English version of the European Standard.

Obsahuje: EN 61918:2013, EN 61918:2013/AC May:2014, IEC 61918:2013

Oznámením tejto normy sa od 02.10.2016 ruší
STN EN 61918 (18 4020) z februára 2009

119249

Úrad pre normalizáciu, metrológiu a skúšobníctvo SR, odbor SÚTN, 2014
Podľa zákona č. 264/1999 Z. z. v znení neskorších predpisov sa môžu slovenské technické normy
rozmnožovať a rozširovať iba so súhlasom Úradu pre normalizáciu, metrológiu a skúšobníctvo SR.

**Industrial communication networks -
 Installation of communication networks in industrial premises
 (IEC 61918:2013, modified)**

Réseaux de communication industriels -
 Installation de réseaux de communication
 dans des locaux industriels
 (CEI 61918:2013, modifiée)

Industrielle Kommunikationsnetze –
 Installation von Kommunikationsnetzen in
 Industrieanlagen
 (IEC 61918:2013, modifiziert)

This European Standard was approved by CENELEC on 2013-10-02. CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CENELEC member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CENELEC member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, the Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

Foreword

The text of document 65C/737/FDIS, future edition 3 of IEC 61918, prepared by SC 65C, "Industrial networks", of IEC/TC 65, "Industrial-process measurement, control and automation" was submitted to the IEC-CENELEC parallel vote and approved by CENELEC as EN 61918:2013.

A draft amendment, which covers common modifications to IEC 61918:2013, was prepared by CLC/TC 65X "Industrial-process measurement, control and automation" and approved by CENELEC.

The following dates are fixed:

- latest date by which this document has to be implemented at national level by publication of an identical national standard or by endorsement (dop) 2014-10-02
- latest date by which the national standards conflicting with this document have to be withdrawn (dow) 2016-10-02

This document supersedes EN 61918:2008.

EN 61918:2013 includes the following significant technical changes with respect to EN 61918:2008:

- some terms and abbreviated terms have been added to Clause 3;
- Subclauses 4.4.3.4.1, 4.4.7.2.1, and 4.4.7.3 have been updated;
- Subclause 5.7.4.3 has been updated as result of the revision of the installation profiles;
- Subclause 6.2.3.1 has been updated;
- Subclause 8.1 has been updated;
- Figure 2, Figure 13, Figure 15, Figure 29, Figure H.1, Table 3, Table 6, Table 7, Table 14, Table B.3 and Table B.5 have been updated;
- a new Figure 35 has been added;
- a new Table 10 has been added;
- Annex D and Annex M have been extended to cover additional communication profile families;
- Annex F has been extended to cover conductor sizes in electrical cables;
- Annex H has been made normative; some common requirements are extended as result of the revision of the installation profiles;
- a new informative Annex O has been added.

This standard is to be used in conjunction with the EN 61784-5 series with regard to the installation of communication profiles (CPs). This standard is to be used in conjunction with ISO/IEC 14763-2 with regard to the installation of generic cabling in accordance with EN 50173-3.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CENELEC [and/or CEN] shall not be held responsible for identifying any or all such patent rights.

Endorsement notice

The text of the International Standard IEC 61918:2013 was approved by CENELEC as a European Standard with agreed common modifications.

COMMON MODIFICATIONS

- **Introduction**

Replace the last paragraph before Figure 2 by:

For the installation of generic cabling this standard is to be used in conjunction with EN 50174 (see Figure 2).

- **Figure 2 – Standards relationships**

Replace the original figure by the following one, which shows the standards relationships at European level:

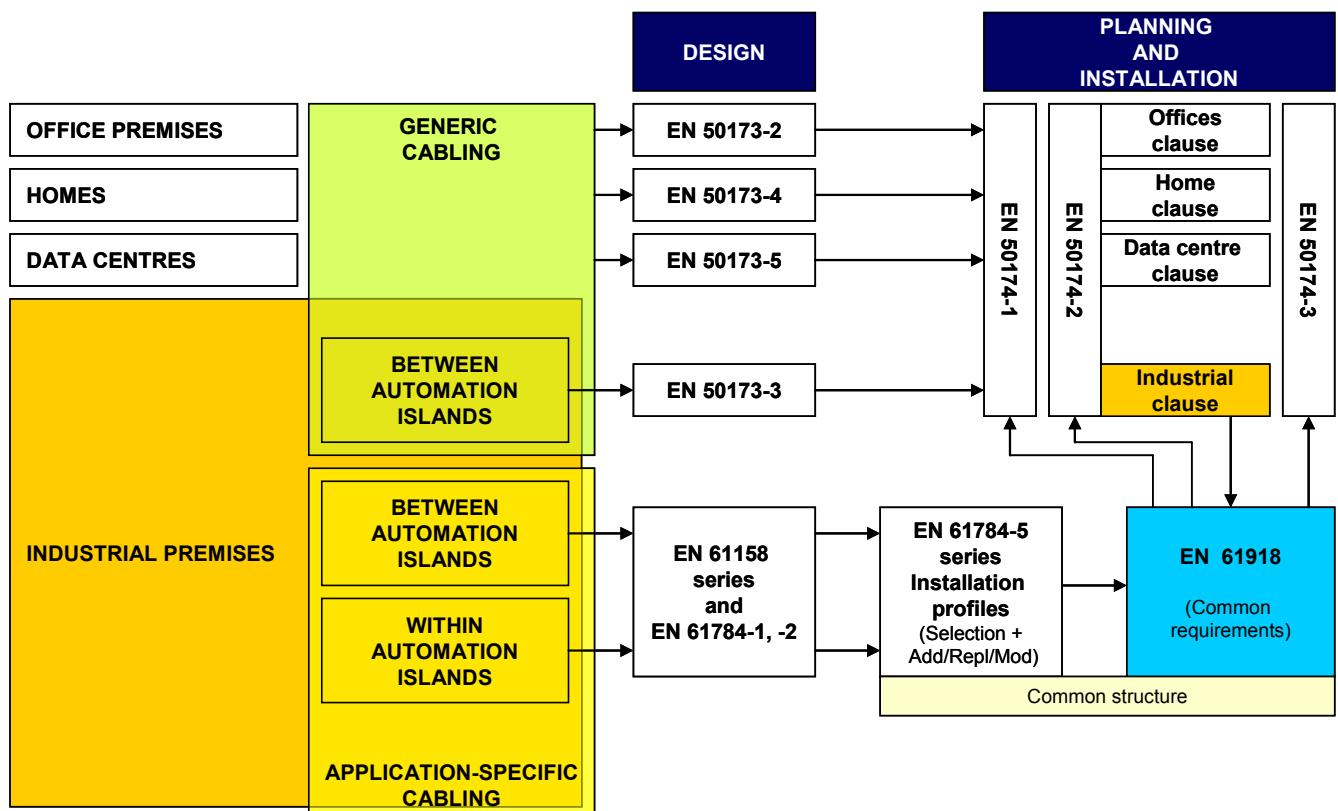

Figure 2 - Network installation: Standards relationships at European level

- **2 Normative references**

In EN 61918 the normative references shall be modified as follows: EN 50288 replaces IEC 61156 and HD 60364 replaces IEC 60364.

- In IEC 61918 the generic cabling is intended as 'in accordance with ISO/IEC 24702'.

In EN 61918 the generic cabling shall be intended as ‘in accordance with EN 50173-3’.

- In the Bibliography, **add** the following notes for the standards indicated:

IEC 60060-1	NOTE Harmonized as EN 60060-1.
IEC 60079-11:2011	NOTE Harmonized as EN 60079-11:2012 (not modified).
IEC 60079-14	NOTE Harmonized as EN 60079-14.
IEC 60228	NOTE Harmonized as EN 60228.
IEC 60332-1 series	NOTE Harmonized in EN 60332-1 series.
IEC 60364 series	NOTE Harmonized in EN/HD 60364 series.
IEC 60512-4 series	NOTE Harmonized in EN 60512-4 series.
IEC 60664-1	NOTE Harmonized as EN 60664-1.
IEC 60670-1:2002	NOTE Harmonized as EN 60670-1:2005 (modified).
IEC 60950-21	NOTE Harmonized as EN 60950-21.
IEC 61000-4-4	NOTE Harmonized as EN 61000-4-4.
IEC 61000-6-2	NOTE Harmonized as EN 61000-6-2.
IEC 61000-6-4	NOTE Harmonized as EN 61000-6-4.
IEC 61010-1	NOTE Harmonized as EN 61010-1.
IEC 61131-2:2007	NOTE Harmonized as EN 61131-2:2007 (not modified).
IEC 61508-4	NOTE Harmonized as EN 61508-4.
IEC 61984:2008	NOTE Harmonized as EN 61984:2009 (not modified).

Annex ZA

(normative)

Normative references to international publications with their corresponding European publications

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

NOTE When an international publication has been modified by common modifications, indicated by (mod), the relevant EN/HD applies.

Corrigendum to EN 61918:2013

English version

Foreword:

The sentence: "This standard is to be used in conjunction with ISO/IEC 14763-2 with regard to the installation of generic cabling in accordance with EN 50173-3."

is to be replaced by:

"This standard is to be used in conjunction with 50174 series, in particular with EN 50174-2, with regard to the installation of generic cabling."

Common Modifications:

In the Introduction, the sentence: "For the installation of generic cabling this standard is to be used in conjunction with EN 50174 (see Figure 2)"

is to be replaced by:

"For the installation of generic cabling this standard is to be used in conjunction with EN 50174 series, in particular with EN 50174-2 (see Figure 2)"

About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigenda or an amendment might have been published.

Useful links:

IEC publications search - www.iec.ch/searchpub

The advanced search enables you to find IEC publications by a variety of criteria (reference number, text, technical committee,...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available on-line and also once a month by email.

Electropedia - www.electropedia.org

The world's leading online dictionary of electronic and electrical terms containing more than 30 000 terms and definitions in English and French, with equivalent terms in additional languages. Also known as the International Electrotechnical Vocabulary (IEV) on-line.

Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: csc@iec.ch.

A propos de la CEI

La Commission Electrotechnique Internationale (CEI) est la première organisation mondiale qui élabore et publie des Normes internationales pour tout ce qui a trait à l'électricité, à l'électronique et aux technologies apparentées.

A propos des publications CEI

Le contenu technique des publications de la CEI est constamment revu. Veuillez vous assurer que vous possédez l'édition la plus récente, un corrigendum ou amendement peut avoir été publié.

Liens utiles:

Recherche de publications CEI - www.iec.ch/searchpub

La recherche avancée vous permet de trouver des publications CEI en utilisant différents critères (numéro de référence, texte, comité d'études,...). Elle donne aussi des informations sur les projets et les publications remplacées ou retirées.

Just Published CEI - webstore.iec.ch/justpublished

Restez informé sur les nouvelles publications de la CEI. Just Published détaille les nouvelles publications parues. Disponible en ligne et aussi une fois par mois par email.

Electropedia - www.electropedia.org

Le premier dictionnaire en ligne au monde de termes électriques et électroniques. Il contient plus de 30 000 termes et définitions en anglais et en français, ainsi que les termes équivalents dans les langues additionnelles. Egalement appelé Vocabulaire Electrotechnique International (VEI) en ligne.

Service Clients - webstore.iec.ch/csc

8.4 Specific requirements for maintenance and troubleshooting	110
Annex A (informative) Overview of generic cabling for industrial premises	111
Annex B (informative) MICE description methodology	112
B.1 General	112
B.2 Overview of MICE	112
B.3 Examples of use of the MICE concept	113
B.3.1 Common description	113
B.3.2 Examples of mitigation	114
B.4 Determining E classification	115
B.5 The MICE table	118
Annex C (informative) Network topologies	120
C.1 Common description	120
C.2 Total cable demand	120
C.3 Maximum cable segment length	120
C.4 Maximum network length	120
C.5 Fault tolerance	120
C.5.1 General	120
C.5.2 Use of redundancy	120
C.5.3 Failure analysis for networks with redundancy	121

C.6 Network access for diagnosis convenience	121
C.7 Maintainability and on-line additions	121
Annex D (informative) Connector tables	122
Annex E (informative) Power networks with respect to electromagnetic interference – TN-C and TN-S approaches	135
Annex F (informative) Conductor sizes in electrical cables	137
Annex G (informative) Installed cabling verification checklists	139
G.1 General	139
G.2 Copper cabling verification checklist	139
G.3 Optical fibre cabling verification checklist	143
Annex H (normative) Cord sets	144
H.1 General	144
H.2 Constructing cord sets	144
H.2.1 Straight through cord sets with M12-4 D-coding connectors	144
H.2.2 Crossover cord sets with M12-4 D-coding connectors	145
H.2.3 Straight through cord sets with 8-way modular connectors	145
H.2.4 Crossover cord sets with 8-way modular connectors	146
H.2.5 Straight conversion from one connector family to another	147
H.2.6 Crossover conversion from one connector family to another	147
Annex I (informative) Guidance for terminating cable ends	149
I.1 General	149
I.2 Guidance for terminating shielded twisted pair cable ends for 8-way modular plugs	149
I.3 Guidance for terminating unshielded twisted pair cable ends for 8-way modular plugs	152
I.4 Guidance for M12-4 D-coding connector installation	153
I.5 Guidance for terminating optical fibre cable ends	155
Annex J (informative) Recommendations for bulkhead connection performance and channel performance with more than 4 connections in the channel	156
J.1 General	156
J.2 Recommendations	156
Annex K (informative) Fieldbus data transfer testing	157
K.1 Background	157
K.2 Allowable error rates for control systems	157
K.2.1 Bit errors	157
K.2.2 Burst errors	157
K.3 Testing channel performance	158
K.4 Testing cable parameters	158
K.4.1 General	158
K.4.2 Generic cable testing	158
K.4.3 Fieldbus cable testing	159
K.5 Testing fieldbus data rate performance	159
K.5.1 General	159
K.5.2 Fieldbus test	159
K.5.3 Planning for fieldbus data rate testing	159
K.5.4 Fieldbus data rate test reporting template	160
K.5.5 Values for acceptable fieldbus performance	160

INTERNATIONAL ELECTROTECHNICAL COMMISSION

INDUSTRIAL COMMUNICATION NETWORKS –

Installation of communication networks in industrial premises

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 61918 has been prepared by subcommittee 65C: Industrial networks, of IEC technical committee 65: Industrial-process measurement, control and automation.

This third edition cancels and replaces the second edition published in 2010. This edition constitutes a technical revision.

This edition includes the following technical changes with respect to the previous edition:

- some terms and abbreviated terms have been added to Clause 3;
- Subclauses 4.4.3.4.1 and 4.4.7.3 have been updated;
- Subclause 8.1 has been updated;
- Figure 13, Figure 29, Figure H.1, Table 3, Table 6, Table 7 and Table B.5 have been updated;
- Annex D and Annex M have been extended to cover additional communication profile families;

- a new informative Annex O has been added.

This standard is to be used in conjunction with the IEC 61784-5 series with regard to the installation of communication profiles (CPs). This standard is to be used in conjunction with ISO/IEC 14763-2 with regard to the installation of generic cabling in accordance with ISO/IEC 24702.

NOTE For further information, see the Introduction.

This standard was developed in cooperation with ISO/IEC JTC1/SC25 which is responsible for ISO/IEC 24702.

The text of this standard is based on the following documents:

FDIS	Report on voting
65C/737/FDIS	65C/742/RVD

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC web site under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

INTRODUCTION

Process and factory automation are increasingly relying on communication networks and fieldbuses that are inherently designed to cope with the specific environmental conditions of the industrial premises. The networks and fieldbuses provide for an effective integration of applications among the several functional units of the plant/factory. One of the benefits of integrating field-generated data with higher-level management systems is to reduce production costs. At the same time, integrated data helps maintain or even increase the quantity and quality of production. A correct network installation is an important prerequisite for communications availability, reliability, and performance. This requires proper consideration of safety and security conditions and environmental aspects such as mechanical, liquid, particulate, climatic, chemicals and electromagnetic interference.

The specifications of these communication networks are provided in the following standards.

ISO/IEC 24702 specifies design of generic telecommunications infrastructures within industrial premises and provides the foundations for some of the transmission performance specifications of this standard. ISO/IEC 24702 specifies only the raw bandwidth capability of a channel; it does not specify useful data transfer rate for a specific network using that channel or expected errors after taking account of interference during the communication process.

IEC 61158 fieldbus standard and IEC 62026-3 and their companion standard IEC 61784-1 and IEC 61784-2 jointly specify several CPs suitable for industrial automation. These CPs specify a raw bandwidth capability and in addition, they specify bit modulation and encoding rules for their fieldbus. Some profiles also specify target levels for useful data transfer rate, and maximum values for errors caused by interference during the communication process.

This standard provides a consistent set of installation rules for industrial premises concerning both generic cabling (of the telecommunication infrastructures) and fieldbuses. In addition, it offers support for the definition and installation of the interfaces between automation island networks and generic cabling. One of the problems it seeks to solve is the situation created when different parts of a large automation site are provided by suppliers that use non-homogeneous installation guidelines having different structures and contents. This lack of consistency greatly increases the potential for errors and mismatch situations liable to compromise the communication system.

This standard was developed by harmonising the approaches of several user groups and industrial consortia.

This standard provides a common point of reference for the installation of the media of most used industrial communication networks for most industrial sites. The standard covers the life cycle of an installation in the following clauses (see the map of the standard in Figure 1):

- Clause 4: Installation planning;
- Clause 5: Installation implementation;
- Clause 6: Installation verification and acceptance test;
- Clause 7: Installation administration;
- Clause 8: Installation maintenance and installation troubleshooting.

The methods described in these clauses are written in such a way as to provide installation guidance for a wide range of technician skills.

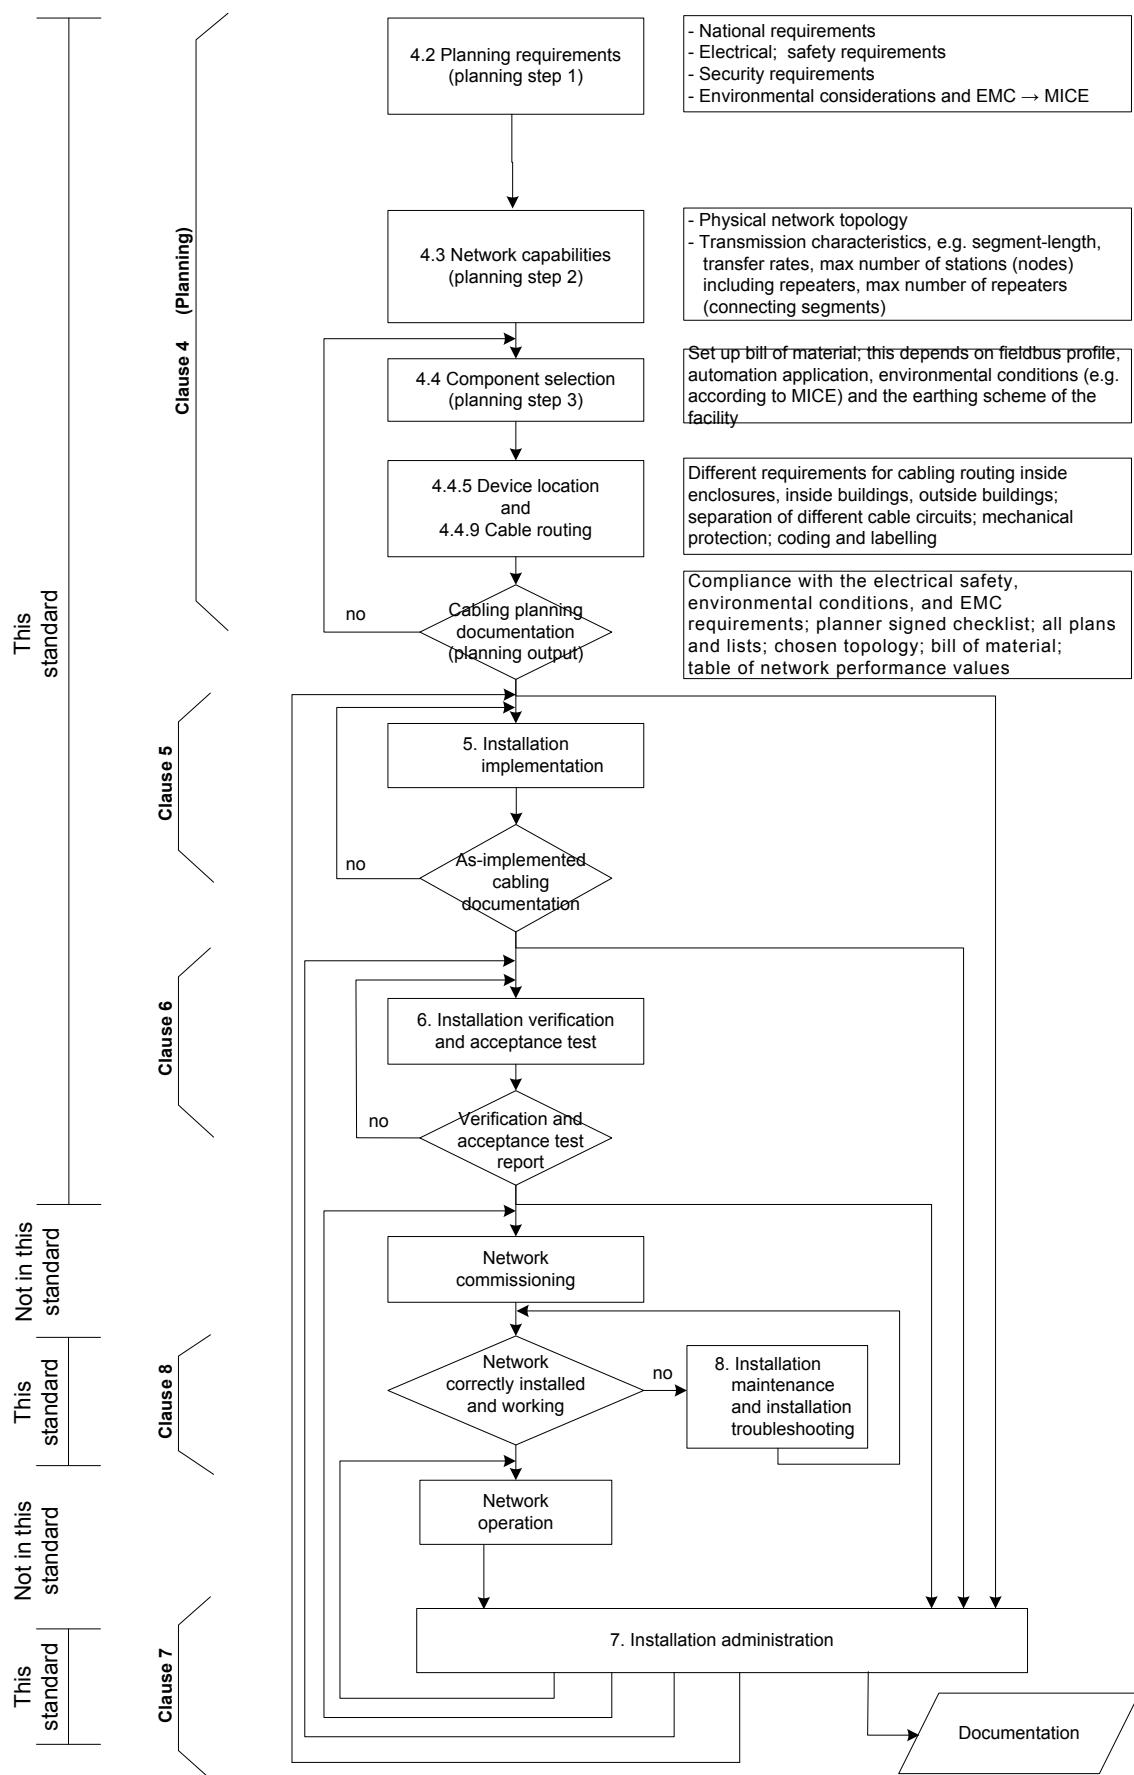

Figure 1 – Industrial network installation life cycle

The installation of a communication system is supported by this standard used in conjunction with the relevant installation profile. The installation profile establishes the technology-specific requirements in terms of which requirements apply as they are in this standard, or which have been extended, modified, or replaced.

For the fieldbuses that are defined in the IEC 61784 series as communication profiles (CPs) of the communication profile families (CPF), the installation is specified in the installation profiles that are available in the IEC 61784-5-n series, where n is the CPF number. IEC 61158-1 describes the relationship between the fieldbus and the CPs and the relevant installation profiles (see Figure 2).

For the installation of generic cabling, this standard is to be used in conjunction with ISO/IEC 14763-2 (see Figure 2).

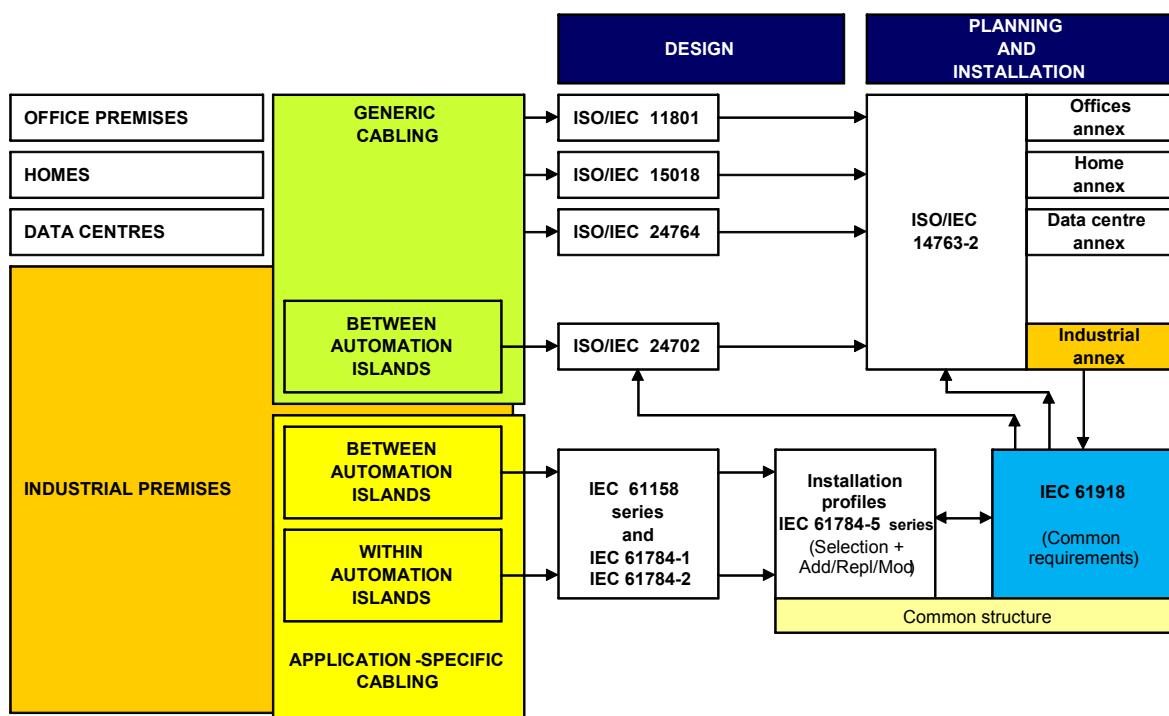

Figure 2 – Standards relationships

One of the advantages of this structure is that the users of a network know which installation requirements are common to most networks and which are specific to a particular network.

Every single plant/factory has its own installation needs in accordance with the specific critical conditions that apply to the specific application. This standard and its companion standards described above provide a set of mandatory installation requirements ("shall") and a number of recommendations ("should"). It is up to the owner of the specific industrial enterprise to explicitly request that the cabling installation be implemented in accordance with these standards and to list all recommendations that shall be considered as mandatory requirements for the specific case.

INDUSTRIAL COMMUNICATION NETWORKS –

Installation of communication networks in industrial premises

1 Scope

This International Standard specifies basic requirements for the installation of media for communication networks in industrial premises and within and between the automation islands, of industrial sites. This standard covers balanced and optical fibre cabling. It also covers the cabling infrastructure for wireless media, but not the wireless media itself. Additional media are covered in the IEC 61784-5 series.

This standard is a companion standard to the communication networks of the industrial automation islands and especially to the communication networks specified in the IEC 61158 series and the IEC 61784 series. In addition, this standard covers:

- the installation of generic telecommunication cabling for industrial premises as specified in ISO/IEC 24702;
- the connection between the generic telecommunications cabling specified in ISO/IEC 24702 and the specific communication cabling of an automation island, where an automation outlet (AO) replaces the telecommunication outlet (TO) of ISO/IEC 24702.

NOTE If the interface used at the AO does not conform to that specified for the TO of ISO/IEC 24702, the cabling no longer conforms to ISO/IEC 24702 although certain features, including performance, of generic cabling may be retained.

This standard provides guidelines that cope with the critical aspects of the industrial automation area (safety, security and environmental aspects such as mechanical, liquid, particulate, climatic, chemicals and electromagnetic interference).

This standard does not recognise implementations of power distribution through Ethernet balanced cabling systems that are not specified in IEEE 802.3 and in IEEE 802.3at.

This standard deals with the roles of planner, installer, verifier, and acceptance test personnel, administration and maintenance personnel and specifies the relevant responsibilities and/or gives guidance.

2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
