English Version

Overhead electrical lines exceeding AC 1 kV - Part 2-22:
National Normative Aspects (NNA) for Poland (based on EN
50341-1:2012)

This European Standard was approved by CENELEC on 2016-02-16. CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CENELEC member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CENELEC member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, the Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

European foreword

1. The Polish Committee for Standardization (NC) is identified by the following address:

Polski Komitet Normalizacyjny
ul. Świętokrzyska 14
00-050 Warszawa
Polska
phone +48 22 55 67 591
e-mail: intdoc@pkn.pl.

Name of the relevant technical body: Komitet Techniczny nr 80 (KT 80) "ds. Ogólnych w Sieciach Elektroenergetycznych" (General of Overhead Electrical Lines)

2. The Polish NC and its technical body KT 80 "for General of Overhead Electrical Lines" has prepared this Part 2-22 of EN 50341, listing the Polish National Normative Aspects (NNA), under its sole responsibility, and duly passed it through the CENELEC and CLC/TC11 procedures.

NOTE: The Polish NC also takes sole responsibility for the technically correct co-ordination of this EN 50341-2-22 with EN 50341-1. It has performed the necessary checks in the frame of quality assurance/control. However, it is noted that this quality control has been made in the framework of the general responsibility of a standards committee under the national laws/regulations.

3. This NNA is normative in Poland and informative for other countries.
4. This Part 2-22 has to be read in conjunction with EN 50341-1, hereafter referred to as Part 1. All clause numbers used in this NNA correspond to those of Part 1. Specific subclauses, which are prefixed "PL", are to be read as amendments to the relevant text in Part 1. Any necessary clarification regarding the application of this NNA in conjunction with Part 1 shall be referred to the Polish NC who will, in co-operation with CLC/TC11, clarify the requirements.

Where no reference is made in this NNA to a specific sub-clause, then Part 1 shall apply.

5. In the case of "boxed values" defined in Part 1, amended values (if any), which are defined in this NNA, shall be taken into account in Poland. However any boxed value whether in Part 1 or in this NNA, shall not be amended in the direction of greater risk in a Project Specification
6. The Polish standards/ regulations, related to overhead electrical lines exceeding 1 kV (AC) are listed in subclause 2.1.

NOTE: All national standards referred to in this Part 2-22 will be replaced by the relevant European Standards as soon as they become available and are declared by the Polish NC to be applicable and thus reported to the secretary of CLC/TC 11.

1. Scope

1.1 General

(ncpt) **PL.1 Scope of application**

This NNA determines the requirements which shall be fulfilled while designing and constructing of new overhead lines with nominal system voltages exceeding 1 kV AC. The scope of use of this NNA for temporary lines shall be determined by the Project Specification. For modernisations, reconstructions and refurbishments of the existing lines, the scope and the requirement to comply with PN-EN-50341-1, together with this NNA, shall be determined by the Project Specification.

1.2 Field of application

(ncpt) **PL.1 Overhead lines with covered conductors**

This NNA applies to overhead lines with covered conductors and overhead insulated cable system with nominal voltage exceeding 1 kV up to 45 kV AC. Additional requirements and simplifications, which apply only to this range of voltages, have been determined.

This NNA does not contain requirements applicable for designing and constructing overhead lines with nominal voltage exceeding 45 kV AC, with covered conductors, where internal and external clearances can be smaller than specified in the NNA.

(ncpt) **PL.2 Optical conductors/wires**

This NNA also applies to optical phase conductors (OPCON) and optical ground wires (OPGW), containing optical fibre telecommunication circuits, installed on overhead line supports.

(ncpt) **PL.3 All Dielectric Self Supporting (ADSS) cables**

This NNA applies to all – dielectric cables (ADSS) only within the scope of their influence on the load of the support and the requirements of the insulator clearances.

(ncpt) **PL.4 Installation of telecommunication fittings**

The NNA also applies to the installation of telecommunication equipment mounted on the new line structures with their primary function as of overhead line supports.

2. Normative references, definitions and symbols

2.1 Normative references

This Polish NNA contains provisions of additional standards and national regulations (apart from those specified in Part 1 of the Standard), which were invoked in the text of the NNA.

The specification of those standards and regulations and Polish versions of Euro codes (PN-EN instead of EN) were presented in the table below; with the provision that the user of the NNA for Poland should check their validity and use the latest editions. There is also a necessity of checking the validity of the national Acts and Regulations specified in item 2.2.
