European foreword

This document (CEN/TR 16879:2016) has been prepared by Technical Committee CEN/TC 136 “Sports, playground and other recreational facilities and equipment”, the secretariat of which is held by DIN.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN shall not be held responsible for identifying any or all such patent rights.

Introduction

CEN/TC 136/SC 1, the committee responsible for the development of EN 1176 standards, considered that there may be risks to children associated with placing playgrounds in the vicinity of other recreational facilities such as multisport arenas, bouldering walls, roller sport facilities, football goals, outdoor fitness equipment and Parkour facilities. In addition, environmental features such as fast flowing water, deep water with steep banks, roads, and natural formations such as cliffs, can also create hazards if in the proximity of playgrounds.

Specific safety requirements for recreational facilities are covered by their own standards. However, these individual standards do not cover possible risks related to the proximity to other recreational facilities and other environmental hazards.

This technical report gives advice to designers, providers, and inspectors on methods of positioning and separating different recreational facilities, to help reduce the potential risks.

There are four principal methods of separation. These are distance, natural features, fencing and signage, or a combination of these.

1 Scope

This Technical Report gives advice on positioning and possible means of separation between recreational facilities that have different user age groups and levels of risk. This document also gives advice on features to consider in order to address the risks from other features nearby such as traffic, fast flowing water, deep water with steep banks and other natural environmental features such as.

Information given relates to equipment and facilities that are installed for free-access use outdoors only.

This document is intended to give a horizontal approach, to be considered in all CEN/TC 136 relevant standards dealing with free access sports or physical activity facilities.

2 Normative references

Not applicable.
