Industrial communication networks - Fieldbus specifications - Part 6-10: Application layer protocol specification - Type 10 elements

Táto norma obsahuje anglickú verziu európskej normy.  
This standard includes the English version of the European Standard.

Táto norma bola označená vo Vestníku ÚNMS SR č. 12/19

Obsahuje: EN IEC 61158-6-10:2019, IEC 61158-6-10:2019

Oznámením tejto normy sa od 25.07.2022 ruší  
STN EN 61158-6-10 (18 4020) z apríla 2015

ICS 25.040.40; 35.100.70; 35.110

Supersedes EN 61158-6-10:2014 and all of its  
amendments and corrigenda (if any)

English Version

**Industrial communication networks - Fieldbus specifications -  
Part 6-10: Application layer protocol specification - Type 10  
elements  
(IEC 61158-6-10:2019)**

Réseaux de communication industriels - Spécifications des  
bus de terrain - Partie 6-10: Spécification du protocole de la  
couche application - Eléments de type 10  
(IEC 61158-6-10:2019)

Industrielle Kommunikationsnetze - Feldbusse - Teil 6-10:  
Protokollspezifikation des Application Layer  
(Anwendungsschicht) - Typ 10-Elemente  
(IEC 61158-6-10:2019)

This European Standard was approved by CENELEC on 2019-07-25. CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CENELEC member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CENELEC member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

**EN IEC 61158-6-10:2019 (E)****European foreword**

The text of document 65C/948/FDIS, future edition 4 of IEC 61158-6-10, prepared by SC 65C "Industrial networks" of IEC/TC 65 "Industrial-process measurement, control and automation" was submitted to the IEC-CENELEC parallel vote and approved by CENELEC as EN IEC 61158-6-10:2019.

The following dates are fixed:

- latest date by which the document has to be implemented at national level by publication of an identical national standard or by endorsement (dop) 2020-04-25
- latest date by which the national standards conflicting with the document have to be withdrawn (dow) 2022-07-25

This document supersedes EN 61158-6-10:2014 and all of its amendments and corrigenda (if any).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CENELEC shall not be held responsible for identifying any or all such patent rights.

**Endorsement notice**

The text of the International Standard IEC 61158-6-10:2019 was approved by CENELEC as a European Standard without any modification.

In the official version, for Bibliography, the following notes have to be added for the standards indicated:

- IEC 60793-2-30 NOTE Harmonized as EN 60793-2-30
- IEC 60793-2-40 NOTE Harmonized as EN 60793-2-40
- IEC 61784-3-3 NOTE Harmonized as EN 61784-3-3

**Annex ZA**  
(normative)

**Normative references to international publications  
with their corresponding European publications**

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

NOTE 1 Where an International Publication has been modified by common modifications, indicated by (mod), the relevant EN/HD applies.

NOTE 2 Up-to-date information on the latest versions of the European Standards listed in this annex is available here: [www.cenelec.eu](http://www.cenelec.eu).

#### About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

#### About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

#### IEC publications search - [webstore.iec.ch/advsearchform](http://webstore.iec.ch/advsearchform)

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee,...). It also gives information on projects, replaced and withdrawn publications.

#### IEC Just Published - [webstore.iec.ch/justpublished](http://webstore.iec.ch/justpublished)

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

#### IEC Customer Service Centre - [webstore.iec.ch/csc](http://webstore.iec.ch/csc)

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: [sales@iec.ch](mailto:sales@iec.ch).

#### Electropedia - [www.electropedia.org](http://www.electropedia.org)

The world's leading online dictionary on electrotechnology, containing more than 22 000 terminological entries in English and French, with equivalent terms in 16 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

#### IEC Glossary - [std.iec.ch/glossary](http://std.iec.ch/glossary)

67 000 electrotechnical terminology entries in English and French extracted from the Terms and Definitions clause of IEC publications issued since 2002. Some entries have been collected from earlier publications of IEC TC 37, 77, 86 and CISPR.

5.1.1 DLPDU abstract syntax reference .....	390
5.1.2 APDU abstract syntax .....	390
5.2 Transfer syntax .....	409
5.2.1 Coding section related to BlockHeader specific fields .....	409
5.2.2 Coding section related to RTA-SDU specific fields .....	424
5.2.3 Coding section related to common address fields .....	429
5.2.4 Coding section related to AL services .....	445
5.2.5 Coding section related to ARVendorBlock .....	479
5.2.6 Coding section related to PNIOStatus .....	481
5.2.7 Coding section related to I&M Records .....	498
5.2.8 Coding section related to Alarm and Diagnosis PDUs .....	505
5.2.9 Coding section related to upload and retrieval .....	527
5.2.10 Coding section related to iParameter .....	527
5.2.11 Coding section related to Physical Device Interface Data .....	528
5.2.12 Coding section related to Physical Device Port Data .....	528
5.2.13 Coding section related to Physical Device IR Data .....	531
5.2.14 Coding section related to Physical Sync Data .....	554
5.2.15 Coding section related to Isochrone Mode Data .....	559
5.2.16 Coding section related to Physical Time Data .....	561
5.2.17 Coding section related to Media Redundancy .....	564
5.2.18 Coding section related to fiber optics .....	575
5.2.19 Coding section related to network components .....	577

5.2.20	Coding section related port statistic .....	578
5.2.21	Coding section related to fast startup.....	581
5.2.22	Coding section related to DFP .....	583
5.2.23	Coding section related to MRPD .....	587
5.2.24	Coding section related to auto configuration .....	588
5.2.25	Coding section related to controller to controller communication.....	591
5.2.26	Coding section related to system redundancy .....	592
5.2.27	Coding section related to energy saving .....	595
5.2.28	Coding section related to asset management.....	595
5.2.29	Coding section related to reporting system .....	600
5.2.30	Coding section related to Logbook.....	606
5.2.31	Coding section related to Time .....	607
5.2.32	Coding section related to Channel Related Process Alarm Reason.....	607
5.2.33	PDU checking rules .....	610
5.3	FAL protocol state machines .....	643
5.3.1	Overall structure .....	643
5.4	AP-Context state machine.....	645
5.5	FAL Service Protocol Machines .....	645
5.5.1	Overview .....	645
5.5.2	FAL Service Protocol Machine Device .....	645
5.5.3	FAL Service Protocol Machine Controller.....	654
5.6	Application Relationship Protocol Machines .....	665
5.6.1	Alarm Protocol Machine Initiator .....	665
5.6.2	Alarm Protocol Machine Responder .....	669
5.6.3	Device .....	673
5.6.4	Controller .....	756
5.7	DLL Mapping Protocol Machines .....	818
Annex A (normative)	Unified establishing of an AR for all RT classes .....	819
A.1	General.....	819
A.2	AR establishing.....	820
A.3	Startup of Alarm transmitter and receiver .....	825
Annex B (normative)	Compatible establishing of an AR.....	828
Annex C (informative)	Establishing of a device access AR .....	831
Annex D (informative)	Establishing of an AR (accelerated procedure).....	832
Annex E (informative)	Establishing of an AR (fast startup procedure).....	835
Annex F (informative)	Example of the upload, storage and retrieval procedure .....	837
Annex G (informative)	OSI reference model layers.....	839
Annex H (informative)	Overview of the IO controller and the IO device state machines .....	840
Annex I (informative)	Priority regeneration .....	842
Annex J (informative)	Overview of the PTCP synchronization master hierarchy .....	843
Annex K (informative)	Optimization of bandwidth usage .....	845
Annex L (informative)	Time constraints for bandwidth allocation .....	847
Annex M (informative)	Time constraints for the forwarding of a frame .....	849
M.1	Principle .....	849
M.2	Forwarding.....	849
Annex N (informative)	Principle of dynamic frame packing .....	851
Annex O (informative)	Principle of Fragmentation .....	855

Annex P (informative) MRPD – Principle of seamless media redundancy .....	858
Annex Q (normative) Principle of a RED_RELAY without forwarding information in PDIRFrameData .....	860
Annex R (informative) Optimization for fast startup without autonegotiation .....	863
Annex S (informative) Example of a PrmBegin, PrmEnd and ApplRdy sequence .....	866
Annex T (informative) List of supported MIBs .....	867
Annex U (informative) Structure and content of BLOB .....	868
Annex V (normative) LLDP EXT MIB .....	869
Annex W (normative) Cross reference to the IEC 62439-2 .....	887
W.1    Cross reference to the IEC 62439-2 .....	887
W.1.1    General .....	887
W.1.2    Ring .....	887
W.1.3    Interconnection .....	888
Annex X (normative) Maintaining statistic counters for Ethernet .....	890
X.1    General .....	890
X.2    Counting model .....	890
X.3    Explanation of the IETF RFC defined statistic counters .....	892
X.4    Value range of the IETF RFC defined statistic counters .....	893

**INTERNATIONAL ELECTROTECHNICAL COMMISSION****INDUSTRIAL COMMUNICATION NETWORKS –  
FIELDBUS SPECIFICATIONS –****Part 6-10: Application layer protocol specification –  
Type 10 elements****FOREWORD**

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

Attention is drawn to the fact that the use of the associated protocol type is restricted by its intellectual-property-right holders. In all cases, the commitment to limited release of intellectual-property-rights made by the holders of those rights permits a layer protocol type to be used with other layer protocols of the same type, or in other type combinations explicitly authorized by its intellectual-property-right holders.

NOTE Combinations of protocol types are specified in IEC 61784-1 and IEC 61784-2.

International Standard IEC 61158-6-10 has been prepared by subcommittee 65C: Industrial networks, of IEC technical committee 65: Industrial-process measurement, control and automation.

This fourth edition cancels and replaces the third edition published in 2014. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- a) integration of system redundancy basic functionality;
- b) integration of dynamic reconfiguration basic functionality;
- c) integration of reporting system basic functionality;
- d) integration of asset management basic functionality; e) integration of media redundancy ring interconnection basic functionality.

The text of this International Standard is based on the following documents:

FDIS	Report on voting
65C/948/FDIS	65C/956/RVD

Full information on the voting for the approval of this International Standard can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with ISO/IEC Directives, Part 2.

A list of all parts of the IEC 61158 series, published under the general title *Industrial communication networks – Fieldbus specifications*, can be found on the IEC web site.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC web site under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be:

- reconfirmed;
- withdrawn;
- replaced by a revised edition, or
- amended.

A bilingual version of this publication may be issued at a later date.

**IMPORTANT – The 'color inside' logo on the cover page of this publication indicates that it contains colors which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a color printer.**

## INTRODUCTION

This document is one of a series produced to facilitate the interconnection of automation system components. It is related to other standards in the set as defined by the “three-layer” fieldbus reference model described in IEC 61158-1.

The application protocol provides the application service by making use of the services available from the data-link or other immediately lower layer. The primary aim of this document is to provide a set of rules for communication expressed in terms of the procedures to be carried out by peer application entities (AEs) at the time of communication. These rules for communication are intended to provide a sound basis for development in order to serve a variety of purposes:

- as a guide for implementers and designers;
- for use in the testing and procurement of equipment;
- as part of an agreement for the admittance of systems into the open systems environment;
- as a refinement to the understanding of time-critical communications within OSI.

This document is concerned, in particular, with the communication and interworking of sensors, effectors and other automation devices. By using this document together with other standards positioned within the OSI or fieldbus reference models, otherwise incompatible systems may work together in any combination.

**NOTE** Attention is drawn to the fact that use of the associated protocol type(s) is restricted by its (their) intellectual-property-right holder(s). In all cases, the commitment to limited release of intellectual-property-rights made by the holder(s) of those rights permits a particular data-link layer protocol type to be used with physical layer and application layer protocols in type combinations as specified explicitly in the IEC 61784 series. Use of the protocol type(s) in other combinations may require permission of their respective intellectual-property-right holder(s).

The International Electrotechnical Commission (IEC) draws attention to the fact that it is claimed that compliance with this document may involve the use of a patent concerning Type 10 elements and possibly other types given in this document as follows:

The following patent rights for Type 10 have been announced by [SI]:

<b>Publication</b>	<b>Title</b>
WO 02/043336	System and method for parallel transfer of real-time critical and non-real-time critical data via switchable data networks, particularly Ethernet
WO 02/076033	Synchronous clocked communication system with decentralized input/output modules and methods for integrating decentralized input/output modules in such a system
WO 03/028258	Method for synchronizing nodes of a communication system
WO 03/028259	Communications system and method for synchronizing a communications cycle
WO 04/030284	Method for permanent redundant transmission of data telegrams in communication systems
EP 1558002	Method for assigning an IP address to a device
EP 1318630	Matrices for controlling the device specific data transfer rates on a field bus

IEC takes no position concerning the evidence, validity and scope of these patent rights.

The holder of these patent rights has assured the IEC that he/she is willing to negotiate licences either free of charge or under reasonable and non-discriminatory terms and conditions with applicants throughout the world. In this respect, the statement of the holder of these patent rights is registered with IEC. Information may be obtained from:

[SI]: Siemens AG  
LC TE IP&IT

Otto-Hahn-Ring 6  
D-81739 Munich  
Germany

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights other than those identified above. IEC shall not be held responsible for identifying any or all such patent rights.

ISO ([www.iso.org/patents](http://www.iso.org/patents)) and IEC ([http://www.iec.ch/tctools/patent\\_decl.htm](http://www.iec.ch/tctools/patent_decl.htm)) maintain on-line data bases of patents relevant to their standards. Users are encouraged to consult the data bases for the most up to date information concerning patents.

## INDUSTRIAL COMMUNICATION NETWORKS – FIELDBUS SPECIFICATIONS –

### Part 6-10: Application layer protocol specification – Type 10 elements

## 1 Scope

### 1.1 General

The Fieldbus Application Layer (FAL) provides user programs with a means to access the fieldbus communication environment. In this respect, the FAL can be viewed as a “window between corresponding application programs.”

This part of IEC 61158 provides common elements for basic time-critical and non-time-critical messaging communications between application programs in an automation environment and material specific to Type 10 fieldbus. The term “time-critical” is used to represent the presence of a time-window, within which one or more specified actions are required to be completed with some defined level of certainty. Failure to complete specified actions within the time window risks failure of the applications requesting the actions, with attendant risk to equipment, plant and possibly human life.

This International Standard defines in an abstract way the externally visible behavior provided by the Type 10 fieldbus application layer in terms of:

- a) the abstract syntax defining the application layer protocol data units conveyed between communicating application entities,
- b) the transfer syntax defining the application layer protocol data units conveyed between communicating application entities,
- c) the application context state machine defining the application service behavior visible between communicating application entities, and
- d) the application relationship state machines defining the communication behavior visible between communicating application entities.

The purpose of this document is to define the protocol provided to:

- a) define the wire-representation of the service primitives defined in IEC 61158-5-10 and
- b) define the externally visible behavior associated with their transfer.

This document specifies the protocol of the Type 10 fieldbus application layer, in conformance with the OSI Basic Reference Model (ISO/IEC 7498-1) and the OSI Application Layer Structure (ISO/IEC 9545).

### 1.2 Specifications

The principal objective of this document is to specify the syntax and behavior of the application layer protocol that conveys the application layer services defined in IEC 61158-5-10.

A secondary objective is to provide migration paths from previously-existing industrial communications protocols. It is this latter objective which gives rise to the diversity of protocols standardized in IEC 61158-6.

### 1.3 Conformance

This document does not specify individual implementations or products, nor does it constrain the implementations of application layer entities within industrial automation systems.

Conformance is achieved through implementation of this application layer protocol specification.

## 2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
