Electrical equipment used for detection and concentration measurement of refrigerant gases - Performance requirements and test methods

Táto norma obsahuje anglickú verziu európskej normy.
This standard includes the English version of the European Standard.

Táto norma bola označená vo Vestníku ÚNMS SR č. 03/20

Obsahuje: EN 50676:2019

This European Standard was approved by CENELEC on 2019-11-04. CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CENELEC member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CENELEC member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

European foreword

This document (EN 50676:2019) has been prepared by CLC/TC 216 "Gas detectors".

The following dates are fixed:

- latest date by which this document has (dop) 2020-11-04
to be implemented at national level by publication of an identical national standard or by endorsement
- latest date by which the national (dow) 2022-11-04
standards conflicting with this document have to be withdrawn

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CENELEC shall not be held responsible for identifying any or all such patent rights.

Introduction

This document specifies test methods and performance requirements for all electrical equipment used for gas detection in refrigerant applications as defined in EN 378-1:2016 by means of concentration measurement.

This document is addressed to the manufacturers of such equipment and test laboratories which validate it.

The tendency to use low-GWP refrigerant gases in the refrigeration and HVAC market (F-Gas Regulation) has intensified the considerations of safety measures for low-GWP gases as some are flammable, toxic and can cause lack of oxygen.

This document covers all refrigerant gases and defines performance requirements for the detection equipment, mentioned in EN 378-3:2016 as gas detectors or sensors, used in refrigerant applications. The level of safety is expected to be the same as in the already existing performance standards for general-purpose equipment, i.e. EN 60079-29-1 concerning refrigerant flammable gases and EN 45544 series concerning refrigerant toxic gases in atmospheres. Refrigerant gases not mentioned by EN 378-1:2016 are also covered by this standard following the categorization scheme of EN 378-1:2016.

1 Scope

This document specifies general requirements for the construction, testing and performance of electrically operated refrigerant fixed gas detection equipment in safety applications. This document does not specify requirements for portable locating leak detectors for refrigerant application as already covered by EN 14624:2012.

This document is applicable to equipment whose primary purpose is to provide an indication, alarm and/or other output function to warn of the presence of refrigerant gases in an industrial or commercial environment and, in some cases, to initiate automatic or manual protective actions. It is applicable to equipment in which the sensor automatically generates an electrical signal when gas is present.

This standard does not apply to gas detection equipment:

- for non-refrigerant application;
- used for air pollution monitoring;
- sampling systems, which are not integral part of the gas detection equipment;
- open path gas detection;
- residential applications;
- process control;
- for applications in mines;
- portable locating leak detectors for refrigerant application.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
