**EN 50397-1:2020 (E)****European foreword**

This document (EN 50397-1:2020) has been prepared by WG 13 "Covered Overhead Line Conductors" of CLC/TC 20 "Electric cables".

The following dates are fixed:

- latest date by which this document has (dop) 2021-10-26  
to be implemented at national level by publication of an identical national standard or by endorsement
- latest date by which the national (dow) 2023-10-26  
standards conflicting with this document have to be withdrawn

This document supersedes EN 50397-1:2006 and all of its amendments and corrigenda (if any).

EN 50397-1:2020 includes the following significant technical changes with respect to EN 50397-1:2006:

- new references to HD 605 S3 2019.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CENELEC shall not be held responsible for identifying any or all such patent rights.

The EN 50397 series consists of three parts:

- Part 1, "Covered conductors";
- Part 2, "Accessories for covered conductors: Tests and acceptance criteria"; and
- Part 3, "Guide to use"

## Introduction

The EN 50397 series covers the construction, performance and test requirements for covered conductors for overhead lines having a nominal voltage  $U$  above 1 kV AC up to and including 36 kV AC, and for the related accessories.

Covered conductors consist of a conductor surrounded by a covering made of insulating material as protection against accidental contacts with other covered conductors and with grounded parts such as tree branches, etc. In comparison with insulated conductors, this covering has reduced properties, but is able to withstand the phase-to-earth voltage temporarily.

Since covered conductors are unscreened, they are not touch-proof, i.e. they should be treated as bare conductors with respect to electric shock.

This document does not cover aspects related to the installation of overhead lines such as determination of clearances, spans, sags, etc.

**EN 50397-1:2020 (E)**

## 1 Scope

This document contains the requirements for covered conductors with or without integrated longitudinal water tightness and/or semi-conductive conductor screen for applications in overhead lines with rated voltages  $U$  above 1 kV a.c. and not exceeding 36 kV a.c.

## 2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
