------------	--	---

Electricity metering equipment - General requirements, tests and test conditions - Part 11: Metering equipment

Táto norma obsahuje anglickú verziu európskej normy.  
This standard includes the English version of the European Standard.

Táto norma bola oznámená vo Vestníku ÚNMS SR č. 06/21

Obsahuje: EN IEC 62052-11:2021, IEC 62052-11:2020

Oznámením tejto normy sa od 02.04.2024 ruší  
STN EN 62052-11 (35 6134) z apríla 2004

NORME EUROPÉENNE

EUROPÄISCHE NORM

April 2021

ICS 17.220.20

Supersedes EN 62052-11:2003 and all of its  
amendments and corrigenda (if any)

English Version

**Electricity metering equipment - General requirements, tests and  
test conditions - Part 11: Metering equipment  
(IEC 62052-11:2020)**

Équipement de comptage de l'électricité - Exigences  
générales, essais et conditions d'essai - Partie 11:  
Équipement de comptage  
(IEC 62052-11:2020)

Elektrizitászähler - Allgemeine Anforderungen, Prüfungen  
und Prüfbedingungen - Teil 11: Messeinrichtungen  
(IEC 62052-11:2020)

This European Standard was approved by CENELEC on 2020-08-03. CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CENELEC member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CENELEC member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

**EN IEC 62052-11:2021 (E)****European foreword**

The text of document 13/1808/FDIS, future edition 2 of IEC 62052-11, prepared by IEC/TC 13 "Electrical energy measurement and control" was submitted to the IEC-CENELEC parallel vote and approved by CENELEC as EN IEC 62052-11:2021.

The following dates are fixed:

- latest date by which the document has to be implemented at national level by publication of an identical national standard or by endorsement (dop) 2021-10-02
- latest date by which the national standards conflicting with the document have to be withdrawn (dow) 2024-04-02

This document supersedes EN 62052-11:2003 and all of its amendments and corrigenda (if any).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CENELEC shall not be held responsible for identifying any or all such patent rights.

This document has been prepared under a mandate given to CENELEC by the European Commission and the European Free Trade Association.

**Endorsement notice**

The text of the International Standard IEC 62052-11:2020 was approved by CENELEC as a European Standard without any modification.

## Annex ZA (normative)

### Normative references to international publications with their corresponding European publications

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

NOTE 1 Where an International Publication has been modified by common modifications, indicated by (mod), the relevant EN/HD applies.

NOTE 2 Up-to-date information on the latest versions of the European Standards listed in this annex is available here: [www.cenelec.eu](http://www.cenelec.eu).

#### **About the IEC**

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

#### **About IEC publications**

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

#### **IEC publications search - [webstore.iec.ch/advsearchform](http://webstore.iec.ch/advsearchform)**

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee,...). It also gives information on projects, replaced and withdrawn publications.

#### **IEC Just Published - [webstore.iec.ch/justpublished](http://webstore.iec.ch/justpublished)**

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

#### **IEC Customer Service Centre - [webstore.iec.ch/csc](http://webstore.iec.ch/csc)**

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: [sales@iec.ch](mailto:sales@iec.ch).

#### **Electropedia - [www.electropedia.org](http://www.electropedia.org)**

The world's leading online dictionary on electrotechnology, containing more than 22 000 terminological entries in English and French, with equivalent terms in 16 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

#### **IEC Glossary - [std.iec.ch/glossary](http://std.iec.ch/glossary)**

67 000 electrotechnical terminology entries in English and French extracted from the Terms and Definitions clause of IEC publications issued since 2002. Some entries have been collected from earlier publications of IEC TC 37, 77, 86 and CISPR.

## CONTENTS

FOREWORD .....	8
INTRODUCTION .....	10
1 Scope .....	13
2 Normative references .....	14
3 Terms and definitions .....	17
3.1 General definitions .....	17
3.2 Definitions related to the functional elements .....	21
3.3 Definitions of meter ports .....	24
3.4 Definitions of mechanical elements .....	25
3.5 Definitions related to measurements .....	27
3.6 Definitions related to external influences .....	30
3.7 Definition of tests .....	33
3.8 Definitions related to electromechanical meters .....	33
3.9 Definitions related to meter marking and symbols .....	34
4 Nominal electrical values .....	35
4.1 Voltages .....	35
4.1.1 Nominal voltages .....	35
4.1.2 Voltage ranges .....	36
4.2 Currents .....	36
4.2.1 Nominal currents .....	36
4.2.2 Starting current .....	36
4.2.3 Minimum current .....	36
4.2.4 Maximum current .....	37
4.2.5 Current ranges .....	37
4.3 Frequencies .....	37
4.3.1 Nominal frequencies .....	37
4.3.2 Frequency ranges .....	37
4.4 Power consumption .....	37
5 Construction requirements .....	39
5.1 General .....	39
5.2 Mechanical tests .....	39
5.2.1 Shock test .....	39
5.2.2 Vibration test .....	40
5.3 Window .....	40
5.4 Terminals – Terminal block(s) – Protective conductor terminal .....	40
5.5 Sealing provisions .....	40
5.5.1 General .....	40
5.5.2 Meter case .....	40
5.5.3 Meter terminals .....	41
5.5.4 Sealing of detached indicating displays .....	41
5.5.5 Sealing of LPIT connections .....	41
5.5.6 Sealing of meter configuration .....	42
5.6 Display of measured values .....	42
5.6.1 General .....	42
5.6.2 Meters without indicating displays .....	42
5.6.3 Meters with indicating displays .....	42

5.7	Storage of measured values .....	43
5.8	Pulse outputs .....	43
5.8.1	General .....	43
5.8.2	Optical test output .....	43
5.8.3	Electrical pulse output .....	45
5.8.4	Operation indicator .....	45
5.9	Electrical pulse inputs .....	46
5.9.1	General characteristics .....	46
5.9.2	Functional tests of electrical pulse inputs .....	46
5.10	Auxiliary power supply .....	46
6	Meter marking and documentation .....	47
6.1	Meter accuracy class marking .....	47
6.2	Meter marking .....	47
6.3	Connection diagrams and terminal marking .....	51
6.4	Symbols .....	51
6.4.1	General .....	51
6.4.2	Symbols for the measuring elements .....	52
6.4.3	Symbols for transformer-operated meters .....	52
6.4.4	Identification of the displayed information .....	52
6.4.5	Marking of the measured quantity .....	53
6.4.6	Symbols of principal units used for meters (see Table 8) .....	53
6.4.7	Symbols for auxiliary devices .....	54
6.4.8	Symbols for details of the suspension of the moving element .....	54
6.4.9	Symbols for communication ports .....	54
6.5	Documentation .....	54
6.5.1	Installation manuals .....	54
6.5.2	Instruction for use .....	54
7	Metrological performance requirements and tests .....	54
7.1	General test conditions .....	54
7.2	Methods of accuracy verification .....	56
7.3	Measurement uncertainty .....	56
7.4	Meter constant .....	57
7.5	Initial start-up of the meter .....	57
7.6	Test of no-load condition .....	58
7.7	Starting current test .....	58
7.8	Repeatability test .....	59
7.9	Limits of error due to variation of the current .....	59
7.10	Limits of error due to influence quantities .....	60
7.11	Time-keeping accuracy .....	60
8	Climatic requirements .....	60
8.1	General .....	60
8.2	Environmental conditions .....	60
8.3	Tests of the effects of the climatic environments .....	60
8.3.1	General test requirements .....	60
8.3.2	Acceptance criteria .....	61
8.3.3	Dry heat test .....	61
8.3.4	Cold test .....	61
8.3.5	Damp heat cyclic test .....	61
8.3.6	Protection against solar radiation .....	62

8.4	Durability .....	62
9	The effects of external influence quantities and disturbances .....	62
9.1	General.....	62
9.2	Acceptance criteria .....	64
9.3	Electromagnetic compatibility (EMC).....	65
9.3.1	General .....	65
9.3.2	Voltage dips and short interruptions.....	67
9.3.3	Electrostatic discharge immunity test.....	69
9.3.4	Radiated, radio-frequency, electromagnetic field immunity test – test without current.....	69
9.3.5	Radiated, radio-frequency, electromagnetic field immunity test – test with current.....	70
9.3.6	Electrical fast transient/burst immunity test.....	70
9.3.7	Immunity to conducted disturbances, induced by radio-frequency fields.....	71
9.3.8	Test for immunity to conducted, differential mode disturbances and signalling in the frequency range 2 kHz to 150 kHz at AC power ports.....	71
9.3.9	Surge immunity test .....	72
9.3.10	Ring wave immunity test.....	74
9.3.11	Damped oscillatory wave immunity test .....	74
9.3.12	External static magnetic fields .....	75
9.3.13	Power frequency magnetic field immunity test .....	76
9.3.14	Emission requirements .....	76
9.4	Tests of immunity to other influence quantities.....	77
9.4.1	General .....	77
9.4.2	Harmonics in the current and voltage circuits.....	77
9.4.3	Voltage variation.....	78
9.4.4	Ambient temperature variation .....	79
9.4.5	Interruption of phase voltage .....	79
9.4.6	Frequency variation .....	80
9.4.7	Reversed phase sequence.....	80
9.4.8	Auxiliary voltage variation.....	80
9.4.9	Operation of auxiliary devices.....	81
9.4.10	Short-time overcurrents .....	81
9.4.11	Self-heating.....	82
9.4.12	Fast load current variations .....	82
9.4.13	Earth fault.....	83
10	Type test .....	83
10.1	Test conditions .....	83
10.2	Type test report .....	84
Annex A (normative) Optical test output.....		85
Annex B (normative) Class A and class B electrical pulse outputs .....		86
B.1	Electrical characteristics of pulse output .....	86
B.2	Electrical output pulse waveform.....	87
B.3	Test of electrical pulse output .....	87
B.4	Test of pulse input .....	87
Annex C (normative) Electrical pulse output for special applications and long distances according to IEC 60381-1:1982 .....		89
C.1	Specified operating conditions and output pulse waveform.....	89
C.2	Test of pulse output .....	90

C.3	Test of pulse input .....	91
Annex D (informative)	Meter symbols and markings .....	92
Annex E (informative)	Meter ports .....	97
Annex F (informative)	Test set-up for EMC tests .....	100
Annex G (informative)	Test for immunity to conducted, differential mode disturbances and signalling in the frequency range 2 kHz to 150 kHz at AC power ports .....	102
Annex H (normative)	Test circuit diagrams for testing influence of harmonics and interharmonics .....	103
Annex I (informative)	Short time overcurrent test waveform .....	109
Annex J (informative)	Fast load current variation test.....	110
Annex K (normative)	Electromagnet for testing the influence of externally produced magnetic fields.....	111
K.1	Permanent magnet for testing the influence of external static magnetic field .....	111
K.2	Electromagnet for testing the influence of external static magnetic field with magneto-motive force of 1 000 At (ampere-turns) (see Figure K.1) .....	111
Annex L (normative)	Test circuit diagram for the test of immunity to earth fault .....	113
Annex M (informative)	Meter current range .....	114
Annex N (informative)	Application to Branch Circuit Power Meters .....	115
N.1	Overview.....	115
N.2	Definitions.....	115
N.3	General.....	115
N.4	Cross-channel influences .....	116
N.5	Channel configuration and sealing for multi-branch meters .....	116
N.6	Verification for multi-branch meters.....	116
Annex O (informative)	Overview of the technical changes .....	117
Annex P (informative)	Test schedule – Recommended test sequences .....	118
Figure A.1	– Test arrangement for the test output .....	85
Figure A.2	– Waveform of the optical test output.....	85
Figure B.1	– Physical interface of the electrical pulse output.....	86
Figure B.2	– Electrical output pulse waveform.....	87
Figure B.3	– Pulse output test set-up .....	87

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

**ELECTRICITY METERING EQUIPMENT –  
GENERAL REQUIREMENTS, TESTS AND TEST CONDITIONS –**

**Part 11: Metering equipment**

**FOREWORD**

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 62052-11 has been prepared by IEC technical committee 13: Electrical energy measurement and control.

This second edition cancels and replaces the first edition published in 2003, and its amendment 1:2016. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition: see Annex O.

The text of this International Standard is based on the following documents:

FDIS	Report on voting
13/1808/FDIS	13/1812/RVD

Full information on the voting for the approval of this International Standard can be found in the report on voting indicated in the above table.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts in the IEC 62052 series, published under the general title *Electricity metering equipment – General requirements*, tests and test conditions, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

NOTE The attention of National Committees is drawn to the fact that equipment manufacturers and testing organizations may need a transitional period following publication of a new, amended or revised IEC publication in which to make products in accordance with the new requirements and to prepare themselves for conducting new or revised tests.

It is the recommendation of the committee that the content of this publication be adopted for implementation nationally not earlier than two years from the date of publication.

## INTRODUCTION

The general overview and organization of the IEC 6205x series of standards applicable to electricity metering and load control equipment is as follows:

PRODUCT FAMILY STANDARDS – GENERAL REQUIREMENTS	PRODUCT FAMILIES				
	AC meters rated up to 1 000 V for direct connection or connection through conventional transformers	Tariff and load control equipment	DC meters rated up to 1 500 V for direct connection	AC meters for connection through LPITs (as defined in the IEC 61869 series of standards)	DC meters for connection through LPITs (as defined in the IEC 61869 series of standards)
NOMINAL VALUES, CONSTRUCTION, ELECTRICAL, CLIMATIC AND EMC REQUIREMENTS. TEST METHODS	IEC 62052-11:2020	IEC 62052-21 2004	IEC 62052-11:2020	Planned: IEC 62052-XX general requirements for meters for connection through LPITs.	
SAFETY	IEC 62052-31:2015		Planned: IEC 62052-31 2 <sup>nd</sup> edition including safety requirements for DC meters	Planned: IEC 62052-XX safety requirements for meters for connection through LPITs.	
DEPENDABILITY	IEC 62059-11: 2002, IEC 62059-21:2002, IEC 62059-32-1 2011, IEC 62059-41:2006		Planned: IEC 62059-XX dependability requirements for DC meters	Planned: IEC 62059-XX dependability requirements for meters for connection through LPITs.	
ACCEPTANCE INSPECTION	IEC 62058-11:2008			Planned: IEC 62058-XX acceptance inspection requirements for meters for connection through LPITs.	
EMBEDDED SOFTWARE	Planned: IEC 6205x-xx embedded software (firmware) requirements and test methods for electricity metering and load control equipment				

<b>PRODUCT FAMILY STANDARDS – PARTICULAR REQUIREMENTS AND ACCURACY CLASSES</b>				
<b>AC meters rated up to 1 000 V for direct connection or connection through conventional transformers</b>	<b>Tariff and load control equipment</b>	<b>DC meters rated up to 1 500 V for direct connection</b>	<b>AC meters for connection through LPITs (as defined in the IEC 61869 series of standards)</b>	<b>DC meters for connection through LPITs (as defined in the IEC 61869 series of standards)</b>
Electromechanical, active energy directly connected, classes 0,5, 1, 2 IEC 62053-11:2003, IEC 62058-21:2008	Ripple control receivers IEC 62054-11:2004	Static, DC energy, directly connected, classes 0,5, 1 IEC 62053-41 –	Planned: LPIT operated meters IEC 62053-xx	Planned: LPIT operated meters IEC 62053-xx
Static, active energy directly connected, and transformer operated, classes 1, 2 IEC 62053-21:2020, IEC 62058-31:2008,	Time switches IEC 62054-21:2004	—	—	—
Static, active energy, transformer operated, classes 0,1S, 0,2S, 0,5S IEC 62053-22:2020, IEC 62058-31:2008	—	—	—	—
Static, reactive energy directly connected, and transformer operated, classes 2, 3 IEC 62053-23:2020	—	—	—	—
Static, reactive energy directly connected, and transformer operated, classes 0,5 S, 1S, 1, 2, 3 IEC 62053-24:2020	—	—	—	—
Static, active energy directly connected, prepayment classes 1, 2 IEC 62055-31:2005	—	—	—	—

This part of IEC 62052 is to be used with relevant parts of the IEC 62052, IEC 62053, IEC 62058 and IEC 62059 series:

IEC 62052-31:2015,	<i>Electricity metering equipment (AC) – General requirements, tests and test conditions – Part 31: Product safety requirements and tests</i>
IEC 62053-11:2003,	<i>Electricity metering equipment (AC) – Particular requirements – Part 11: Electromechanical meters for active energy (classes 0,5, 1 and 2)</i>
IEC 62053-21:2020,	<i>Electricity metering equipment – Particular requirements – Part 21: Static meters for AC active energy (classes 1 and 2)</i>
IEC 62053-22:2020,	<i>Electricity metering equipment – Particular requirements – Part 22: Static meters for AC active energy (classes 0,1S, 0,2S and 0,5S)</i>
IEC 62053-23:2020,	<i>Electricity metering equipment – Particular requirements – Part 23: Static meters for reactive energy (classes 2 and 3)</i>

IEC 62053-24:2020,	<i>Electricity metering equipment– Particular requirements – Part 24: Static meters for fundamental component reactive energy (classes 0,5S, 1S, 1, 2 and 3)</i>
IEC 62053-41: – ,	<i>Electricity metering equipment– Particular requirements – Part 41: Static meters for direct current energy (classes 0,5 and 1)</i>
IEC 62055-31:2005,	<i>Electricity metering – Payment systems – Part 31: Particular requirements – Static payment meters for active energy (classes 1 and 2)</i>
IEC 62056-6-1:2017,	<i>Electricity metering data exchange – The DLMS/COSEM suite – Part 6-1: Object Identification System (OBIS)</i>
IEC 62056-6-2:2017,	<i>Electricity metering data exchange – The DLMS/COSEM suite – Part 6-2: COSEM interface classes</i>
IEC 62057-1: – ,	<i>Test equipment, techniques and procedures for electrical energy meters – Part 1: Stationary Meter Test Units (MTU)</i>
IEC 62058-11:2008,	<i>Electricity metering equipment (AC) – Acceptance inspection – Part 11: General acceptance inspection methods</i>
IEC 62058-21:2008,	<i>Electricity metering equipment (AC) – Acceptance inspection – Part 21: Particular requirements for electromechanical meters for active energy (classes 0,5, 1 and 2)</i>
IEC 62058-31:2008,	<i>Electricity metering equipment (AC) – Acceptance inspection – Part 31: Particular requirements for static meters for active energy (classes 0,2 S, 0,5 S, 1 and 2)</i>
IEC 62059-11:2002,	<i>Electricity metering equipment – Dependability – Part 11: General concepts</i>
IEC 62059-21:2002,	<i>Electricity metering equipment – Dependability – Part 21: Collection of meter dependability data from the field</i>
IEC 62059-32-1:2011,	<i>Electricity metering equipment – Dependability – Part 32-1: Durability – Testing of the stability of metrological characteristics by applying elevated temperature</i>

This document is intended to be used in conjunction with the appropriate part of IEC 62053 for the type of equipment under consideration.

The test levels are regarded as minimum values for the proper functioning of the meter under normal working conditions. For special application, other test levels may be used and are subject to an agreement between the manufacturer and the purchaser.

# ELECTRICITY METERING EQUIPMENT – GENERAL REQUIREMENTS, TESTS AND TEST CONDITIONS –

## Part 11: Metering equipment

### 1 Scope

This part of IEC 62052 specifies requirements and associated tests, with their appropriate conditions for type testing of AC and DC electricity meters. This document details functional, mechanical, electrical and marking requirements, test methods, and test conditions, including immunity to external influences covering electromagnetic and climatic environments.

NOTE 1 For other general requirements, such as safety, dependability, etc., see the relevant IEC 62052 or IEC 62059 standards. For accuracy requirements and other requirements specific to class indices, see the relevant IEC 62053 standards.

This document applies to electricity metering equipment designed to:

- measure and control electrical energy on electrical networks (mains) with voltage up to 1 000 V AC, or 1 500 V DC;

NOTE 2 For AC electricity meters, the voltage mentioned above is the line-to-neutral voltage derived from nominal voltages. See IEC 62052-31:2015, Table 7.

NOTE 3 For meters designed for operation with LPITs, only the metering unit is considered a low voltage device. If the LPITs are rated for voltages exceeding 1 000 V AC, or 1 500 V DC, the combination of the metering unit and LPITs is not a low voltage device.

- have all functional elements, including add-on modules, enclosed in, or forming a single meter case with exception of indicating displays;
- operate with integrated displays (electromechanical or static meters);
- operate with detached indicating displays, or without an indicating display (static meters only);
- be installed in a specified matching sockets or racks;
- optionally, provide additional functions other than those for measurement of electrical energy.

Meters designed for operation with Low Power Instrument Transformers (LPITs as defined in the IEC 61869 series) may be tested for compliance with this document and the relevant IEC 62053 series documents only if such meters and their LPITs are tested together as directly connected meters.

NOTE 4 Modern electricity meters typically contain additional functions such as measurement of voltage magnitude, current magnitude, power, frequency, power factor, etc.; measurement of power quality parameters; load control functions; delivery, time, test, accounting, and recording functions; data communication interfaces and associated data security functions. The relevant standards for these functions may apply in addition to the requirements of this document. However, the requirements for such functions are outside the scope of this document.

NOTE 5 Product requirements for Power Metering and Monitoring Devices (PMDs) and measurement functions such as voltage magnitude, current magnitude, power, frequency, etc., are covered in IEC 61557-12. However, devices compliant with IEC 61557-12 are not intended to be used as billing meters unless they are also compliant with IEC 62052-11 and one or more relevant IEC 62053-xx particular requirements (accuracy class) standard.

NOTE 6 Product requirements for Power Quality Instruments (PQIs) are covered in IEC 62586-1. Requirements for power quality measurement techniques (functions) are covered in IEC 61000-4-30. Requirements for testing of the power quality measurement functions are covered in IEC 62586-2.

NOTE 7 The IEC TC13 strives to consider EMC phenomena that may occur in practice in meter installations and to amend its standards to ensure that an appropriate level of electromagnetic compatibility is specified for electricity metering equipment. To this end, IEC TC13 cooperates with the relevant IEC technical committees to characterize electromagnetic phenomena, to define emission limits, immunity levels and immunity verification methods based on which the appropriate test methods and requirements can be developed in the TC13 electricity metering equipment standards.

This document is also applicable to auxiliary input and output circuits, operation indicators, and test outputs of equipment for electrical energy measurement.

NOTE 8 Some examples include pulse inputs and outputs, control inputs and outputs, and energy test outputs.

This document also covers the common aspects of accuracy testing such as reference conditions, repeatability and measurement of uncertainty.

This document does not apply to:

- meters for which the voltage line-to-neutral derived from nominal voltages exceeds 1 000 V AC, or 1 500 V DC;
- meters intended for connection with low power instrument transformers (LPITs as defined in the IEC 61869 series of standards) when tested without such transformers;
- metering systems comprising multiple devices (except of LPITs) physically remote from one another;
- portable meters;

NOTE 9 Portable meters are meters that are not permanently connected.

- meters used in rolling stock, vehicles, ships and airplanes;
- laboratory and meter test equipment;
- reference standard meters;

NOTE 10 Nominal values, accuracy classes, requirements and test methods for reference standard meters are specified in IEC 62057-1: –.

- data interfaces to the register of the meter;
- matching sockets or racks used for installation of electricity metering equipment;
- any additional functions provided in electrical energy meters.

This document does not cover measures for the detection and prevention of fraudulent attempts to compromise a meter's performance (tampering).

NOTE 11 Nevertheless, specific tampering detection and prevention requirements, and test methods, as relevant for a particular market are subject to agreement between the manufacturer and the purchaser.

NOTE 12 Specifying requirements and test methods for fraud detection and prevention would be counterproductive, as such specifications would provide guidance for potential fraudsters.

NOTE 13 There are many types of meter tampering reported from various markets; therefore, designing meters to detect and prevent all types of tampering could lead to unjustified increase in costs of meter design, verification and validation.

NOTE 14 Billing systems, such as smart metering systems, are capable of detecting irregular consumption patterns and irregular network losses which enable discovery of suspected meter tampering.
