Space engineering - Adhesive bonding handbook

Táto technická normalizačná informácia obsahuje anglickú verziu CEN/TR 17603-32-21:2022.
This Technical standard information includes the English version of CEN/TR 17603-32-21:2022.

Táto technická normalizačná informácia bola oznámená vo Vestníku ÚNMS SR č. 08/22

TECHNICAL REPORT**CEN/TR 17603-32-21****RAPPORT TECHNIQUE****TECHNISCHER BERICHT**

June 2022

ICS 49.025.50; 49.030.99; 49.140

English version

Space engineering - Adhesive bonding handbook

Ingénierie spatiale - Manuel de collage

Raumfahrttechnik - Handbuch zu geklebten
Verbindungen

This Technical Report was approved by CEN on 13 April 2022. It has been drawn up by the Technical Committee CEN/CLC/JTC 5.

CEN and CENELEC members are the national standards bodies and national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

CEN-CENELEC Management Centre:
Rue de la Science 23, B-1040 Brussels

Table of contents

European Foreword.....	27
1 Scope.....	28
2 References	29
3 Terms, definitions and abbreviated terms.....	30
3.1 Terms from other documents.....	30
3.2 Terms specific to the present document'	30
3.3 References	48
4 Joining.....	49
4.1 Joining methods for space structures.....	49
4.1.1 General	49
4.1.2 Adhesive bonding	49
4.1.3 Mechanical fastening disadvantages.....	50
4.2 References	51
4.2.1 General	51
4.2.2 ECSS documents.....	52
5 Adherends.....	53
5.1 Introduction.....	53
5.1.1 General	53
5.1.2 Polymer composites.....	54
5.1.3 Metals	54
5.1.4 Ceramics.....	55
5.2 Advanced composites.....	56
5.2.1 Polymer-based composites	56
5.2.2 FML - Fibre metal laminates.....	60
5.2.3 MMC - Metal matrix composites	60
5.3 Metals.....	61
5.3.1 Structural materials	61
5.3.2 New materials	61
5.4 Higher-temperature applications	62

CEN/TR 17603-32-21:2022 (E)

5.4.1	Adherends	62
5.4.2	Adhesives	62
5.4.3	General guidelines	64
5.5	Low-temperature and cryogenic applications	64
5.5.1	Adherends	64
5.5.2	Adhesives	64
5.5.3	General guidelines	65
5.6	Bonds between adherends	65
5.6.1	General	65
5.6.2	Composite-to-composite	65
5.6.3	Composite-to-metal	66
5.6.4	Metal-to-metal	66
5.6.5	Dissimilar materials	66
5.7	References	67
5.7.1	General	67
5.7.2	ECSS documents	68
6	Adhesive characteristics and properties	69
6.1	Introduction	69
6.1.1	General	69
6.1.2	Guidelines	69
6.2	Types of adhesives	70
6.2.1	Formulation	70
6.2.2	Characteristics	70
6.2.3	Mechanical properties	73
6.2.4	Environmental durability	73
6.2.5	Aerospace structural adhesives	74
6.3	Epoxy-based adhesives	74
6.3.1	General	74
6.3.2	Properties	75
6.3.3	Environmental durability	80
6.4	Polyimide-based adhesives	84
6.4.1	General	84
6.4.2	Properties	85
6.5	Bismaleimide-based adhesives	87
6.5.1	General	87
6.5.2	Properties	87
6.6	Silicone-based adhesives	89

CEN/TR 17603-32-21:2022 (E)

6.6.1	General	89
6.6.2	Properties	89
6.6.3	Environmental durability	91
6.7	Elastomeric adhesives	92
6.7.1	General	92
6.8	Adhesives used in space	92
6.8.1	Adhesive systems	92
6.9	References	96
6.9.1	General	96
6.9.2	Data sheets	97
6.9.3	Sources	98
6.9.4	ECSS documents	98
6.9.5	Other standards	98
7	Adhesive selection	99
7.1	Introduction	99
7.2	Adhesive selection factors	99
7.2.1	Guidelines	99
7.2.2	Evaluation exercise	99
7.2.3	Trade-off	100
7.3	Post application selection factors	101
7.3.1	Earth environment	101
7.3.2	Space environment	103
7.4	Pre-application selection factors	106
7.4.1	Joint design	106
7.4.2	Adhesive systems	106
7.4.3	Environmental factors	108
7.4.4	Cost factors	108
7.5	Application	109
7.5.1	Method	109
7.5.2	Cure factors	110
7.5.3	Health and safety	111
7.6	Adhesive screening criteria for space	112
7.7	References	113
7.7.1	General	113
7.7.2	ECSS documents	114
7.7.3	Other standards	115
8	Basic joint types	116

CEN/TR 17603-32-21:2022 (E)

8.1	Introduction.....	116
8.2	Bond or mechanically fasten.....	116
8.2.1	General.....	116
8.2.2	Adhesive bonding in the space industry.....	118
8.3	Loading modes.....	118
8.4	Tensile shear loading.....	119
8.4.1	General.....	119
8.4.2	Joint geometry.....	120
8.4.3	Composite adherends.....	122
8.5	References.....	124
8.5.1	General.....	124
8.5.2	Sources.....	124
8.5.3	ECSS documents.....	125
9	Joint selection	126
9.1	Introduction.....	126
9.2	Joint strength.....	126
9.2.1	Failure modes.....	126
9.2.2	Guidelines.....	130
9.2.3	Joint design.....	131
9.3	Fatigue resistance.....	132
9.3.1	General.....	132
9.3.2	Joint evaluation.....	132
9.3.3	Factors influencing fatigue resistance.....	133
9.4	Acoustic fatigue resistance.....	135
9.4.1	Bonded carbon/epoxy composite joints.....	135
9.5	References.....	137
9.5.1	General.....	137
10	Theory and design practices	138
10.1	Introduction.....	138
10.1.1	Analysis.....	138
10.1.2	Factors of safety.....	138
10.2	Basic theories of bonded joints.....	138
10.2.1	Shear lag analysis.....	138
10.2.2	Linear-elastic stress-strain response.....	139
10.2.3	Non-linear stress-strain response.....	139
10.3	Environmental factors for bonded joints.....	144
10.3.1	Effect of temperature and moisture.....	144

CEN/TR 17603-32-21:2022 (E)

10.4	Effect of bonding defects	148
10.4.1	General	148
10.4.2	Description of bonding defects	148
10.4.3	NDT non-destructive techniques	156
10.5	Double lap and double strap joints	158
10.5.1	Stress distribution	158
10.6	Single lap joints	162
10.6.1	General	162
10.6.2	Load path eccentricity	162
10.6.3	Joint efficiencies	162
10.6.4	Adhesive characteristics	165
10.7	Double-sided stepped lap joints	165
10.7.1	Joint strength	165
10.7.2	Adherend stiffness balance	165
10.8	Single-sided stepped lap joints	168
10.8.1	Joint strength	168
10.9	Scarf joints	168
10.9.1	Joint strength	168
10.10	Calculation of bonded joint strength	169
10.11	Analysis of joint configurations	169
10.11.1	Analytical notation	169
10.11.2	Single lap shear joint	170
10.11.3	Double lap shear joint	173
10.11.4	Double-lap shear joint under mechanical and temperature loads	175
10.11.5	Single taper scarf joint	183
10.11.6	Double taper scarf joint	184
10.11.7	Stepped lap joint	185
10.11.8	Analysis of environmental factors	186

European Foreword

This document (CEN/TR 17603-32-21:2022) has been prepared by Technical Committee CEN/CLC/JTC 5 “Space”, the secretariat of which is held by DIN.

It is highlighted that this technical report does not contain any requirement but only collection of data or descriptions and guidelines about how to organize and perform the work in support of EN 16603-32.

This Technical report (CEN/TR 17603-32-21:2022) originates from ECSS-E-HB-32-21A.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN [and/or CENELEC] shall not be held responsible for identifying any or all such patent rights.

This document has been prepared under a mandate given to CEN by the European Commission and the European Free Trade Association.

This document has been developed to cover specifically space systems and has therefore precedence over any TR covering the same scope but with a wider domain of applicability (e.g.: aerospace).

1

Scope

This handbook is an acceptable way of meeting the requirements of adhesive materials in bonded joints of ECSS-E-ST-32.

2 References

Due to the structure of the document, each clause includes at its end the references called in it.
