English Version

Paints and varnishes - Coating materials and coating systems for exterior wood - Part 14: Determination of tensile properties of coating films

Peintures et vernis - Produits de peinture et systèmes de peinture pour le bois en extérieur - Partie 14 : Détermination des propriétés en traction des films de revêtement Beschichtungsstoffe - Beschichtungsstoffe und Beschichtungssysteme für Holz im Außenbereich - Teil 14: Bestimmung der Zugeigenschaften von Beschichtungsfilmen

This European Standard was approved by CEN on 25 December 2022.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Türkiye and United Kingdom.

European foreword

This document (EN 927-14:2023) has been prepared by Technical Committee CEN/TC 139 "Paints and varnishes", the secretariat of which is held by DIN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by July 2023, and conflicting national standards shall be withdrawn at the latest by July 2023.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN shall not be held responsible for identifying any or all such patent rights.

Any feedback and questions on this document should be directed to the users' national standards body. A complete listing of these bodies can be found on the CEN website.

According to the CEN-CENELEC Internal Regulations, the national standards organisations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Türkiye and the United Kingdom.

EN 927-14:2023

Introduction

Wood as a natural exterior construction material may be protected from rain, sunlight and microbial attack by a coating film, thus ensuring its appearance and mechanical integrity over many years. However, since most coatings are permeable to some extent to moisture from rain and air humidity, swelling of the wood and coating occurs. Consequent shrinking of the wood and coating occurs upon drying. The magnitude of swelling and shrinking depends on the amount of moisture uptake and varies depending on the wood species and on the direction of wood movement (longitudinal < radial < tangential). These cyclic expansions and contractions lead to different stresses in the surface coating over time. The coating should ideally stay intact over time and continue to protect the wood substrate. A coating material that is too rigid and brittle will crack and fail allowing increased moisture and water uptake, microbial attack, eventual complete coating failure and possible wood degradation. The tensile properties of the coatings are thus very important for the service lifetime of the coating and wood substrate.

1 Scope

This document specifies a method for determining the tensile properties of free coating films, specifically for exterior wood applications. Typical tensile properties of interest are the modulus of elasticity, the tensile strength and the elongation at break during stretching of a free coating film at constant test speed. The test methods specified in this document are applicable to coatings from which free films can be made.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

EN 927-1:2013, Paints and varnishes - Coating materials and coating systems for exterior wood - Part 1: Classification and selection

koniec náhľadu – text ďalej pokračuje v platenej verzii STN

NOTE Automatic application devices are preferred as they move at constant speed and deliver a more uniform final coating film.
