English version

**Data protection and privacy by design and by default -
Technical Report on applicability to the video surveillance
industry - State of the art**

Datenschutz durch Technikgestaltung und durch
datenschutzfreundliche Voreinstellungen -
Technischer Bericht über die Anwendbarkeit in der
Videoüberwachungsindustrie - Stand der Technik

This Technical Report was approved by CEN on 9 January 2023. It has been drawn up by the Technical Committee CEN/CLC/JTC 13.

CEN and CENELEC members are the national standards bodies and national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Türkiye and United Kingdom.

European foreword

This document (CEN/CLC/TR 17919:2023) has been prepared by Technical Committee CEN/CLC/JTC 013 “Cybersecurity and Data protection”, the secretariat of which is held by DIN.

This document has been prepared in complement of EN 17529: *Data protection and privacy by design and by default 2021*, under mandate M530 given to CEN/CENELEC by the European Commission.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN shall not be held responsible for identifying any or all such patent rights.

Any feedback and questions on this document should be directed to the users’ national standards body. A complete listing of these bodies can be found on the CEN website.

CEN/CLC/TR 17919:2023 (E)**Introduction**

This document explains how EN 17529, “Data Protection and Privacy by Design and by Default”, is applicable to the video-surveillance industry, a security industry which is permanently serving the objectives of its various customers, themselves subject to a balance between privacy and security expectations, eventually changing with the political, local and conjunctural situations.

EN 17529 defines the process through which the developers and/or manufacturers of all types of products and services make sure that the end-users thereof will be encouraged and be able to use them in compliance with the applicable privacy rules, directly or after an appropriate set-up. Concretely, implementing this standard will allow this industry sector to provide its customers (and especially their data controllers) with solutions designed with the necessary options and flexibility to comply with their privacy protection obligations over the lifetime of the delivered solutions.

It should be noted that in parallel to this report, the European Data Protection Board (EDPB) has published its *Guidelines 3/2019 on processing of personal data through video devices*, version 2.0, which provide an official interpretation of the use of the Regulation (EU) 2016/679 of the European Parliament and of the Council of 27 April 2016 on the protection of natural persons with regard to the processing of personal data and on the free movement of such data, and repealing Directive 95/46/EC (General Data Protection Regulation, GDPR) applied to video-surveillance systems.

1 Scope

This document illustrates, through a review of the state of the art, the applicability of the EN 17529 to the domain of the video-surveillance industries, a security industrial domain which is serving the objectives of its various customers, themselves subject to a delicate balance between privacy and security objectives eventually changing with the political, local and conjunctural situations.

Implementing this standard will allow this industry to provide its customers with solutions designed with the necessary options and flexibility to contribute to their privacy protection obligations over the lifetime of the delivered solution.

The present document considers at this stage the core video-surveillance solutions consisting in up to:

- A number of cameras (fixed or PTZ);
- A Video Management System (VMS) including its storage capability;
- A display and replay capability:

Basic video analytics allowing automatic detection in the video of each camera of simple geometric situations (movement detection, line crossing, etc.), but excluding embedded tools allowing automated distinguishing, direct identification or tracking of individuals;

- IP interfacing with external (not included) terminals.

This basic set-up may be expanded in future versions.

The “off-the-shelf” system and sub-system manufacturers are the core targets of this document; companies doing systems installation may be indirectly addressed, but service providers eventually running the systems are not covered.

2 Normative references

The following documents are referred to in the text in such a way that some, or all, of their content constitutes references for this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
