Hardware for furniture - Test methods for strength and overload tests of connectors for furniture constructed from panel material

Táto norma obsahuje anglickú verziu európskej normy.  
This standard includes the English version of the European Standard.

Táto norma bola oznámená vo Vestníku ÚNMS SR č. 05/23

Obsahuje: EN 17869:2023

**136812**

EUROPEAN STANDARD

English Version

## Hardware for furniture - Test methods for strength and overload tests of connectors for furniture constructed from panel material

Quincaillerie d'ameublement - Méthodes d'essai pour détermination de la résistance mécanique et rigidité de ferrures d'assemblage de corps de meuble

Möbelbeschläge - Prüfverfahren zur Durchführung von Festigkeits- und Schwellbelastungstests von Korpuseckverbindern für Möbel aus Holzwerkstoffplatten

This European Standard was approved by CEN on 13 January 2023.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Türkiye and United Kingdom.

**EN 17869:2023 (E)****European foreword**

This document (EN 17869:2023) has been prepared by Technical Committee CEN/TC 207 “Furniture”, the secretariat of which is held by UNI.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by September 2023, and conflicting national standards shall be withdrawn at the latest by September 2023.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN shall not be held responsible for identifying any or all such patent rights.

Any feedback and questions on this document should be directed to the users’ national standards body. A complete listing of these bodies can be found on the CEN website.

According to the CEN-CENELEC Internal Regulations, the national standards organisations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Türkiye and the United Kingdom.

## 1 Scope

This document specifies test methods for the strength and overload tests of connectors for furniture constructed from panel material and procedures for evaluating test results.

This document is specifically intended for assessing cabinet connectors for carcasses made of wood-based panel materials. The methods described can, however, be used to assess the relative performance of other types of connectors, e.g. some types of connectors for beds.

The strength and overload tests only apply to the connectors and their components, as well as the mounting to and in the cabinet carcass. They do not apply to additional functions that the connector can have, e.g. covering of the connector.

The tests described in this document are carried out according to a test setup with specified properties and characteristics.

The test results are only valid for the connector tested. The results can be used to represent the performance of production models, provided the tested model is representative of the production model.

Aging and the influences of temperature and humidity are not included. This document contains four informative annexes, providing additional methodologies for the detailed evaluation of the test results and a procedure for comparing the tested connector with a reference connector:

- Annex A (informative) Reference connector — Glued dowel;
- Annex B (informative) Ratio generation;
- Annex C (informative) Stiffness calculation for further evaluation of the overload;
- Annex D (informative) Evaluation by the characteristic value (5 % percentile).

## 2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

EN 312, *Particleboards — Specifications*

EN 320, *Particleboards and fibreboards — Determination of resistance to axial withdrawal of screws*

EN 323, *Wood-based panels — Determination of density*
