This European Standard was approved by CENELEC on 2023-04-28. CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CENELEC member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CENELEC member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Türkiye and the United Kingdom.

Ref. No. EN IEC 61158-6-10:2023 E

European foreword

The text of document 65C/1204/FDIS, future edition 5 of IEC 61158-6-10, prepared by SC 65C "Industrial networks" of IEC/TC 65 "Industrial-process measurement, control and automation" was submitted to the IEC-CENELEC parallel vote and approved by CENELEC as EN IEC 61158-6-10:2023.

The following dates are fixed:

- latest date by which the document has to be implemented at national level by publication of an identical national standard or by endorsement (dop) 2024-01-28
- latest date by which the national standards conflicting with the document have to be withdrawn (dow) 2026-04-28

This document supersedes EN IEC 61158-6-10:2019 and all of its amendments and corrigenda (if any).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CENELEC shall not be held responsible for identifying any or all such patent rights.

Any feedback and questions on this document should be directed to the users' national committee. A complete listing of these bodies can be found on the CENELEC website.

Endorsement notice

The text of the International Standard IEC 61158-6-10:2023 was approved by CENELEC as a European Standard without any modification.

In the official version, for Bibliography, the following notes have to be added for the standard indicated:

About the IEC
The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications
The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

IEC publications search - webstore.iec.ch/advsearchform
The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, …). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished
Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

IEC Customer Service Centre - webstore.iec.ch/csc
If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: sales@iec.ch.

IEC Products & Services Portal - products.iec.ch
Discover our powerful search engine and read freely all the publications previews. With a subscription you will always have access to up to date content tailored to your needs.

Electropedia - www.electropedia.org
The world's leading online dictionary on electrotechnology, containing more than 22 300 terminological entries in English and French, with equivalent terms in 19 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

INDUSTRIAL COMMUNICATION NETWORKS – FIELDBUS SPECIFICATIONS –

Part 6-10: Application layer protocol specification – Type 10 elements

FOREWORD

1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
6) All users should ensure that they have the latest edition of this publication.
7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

Attention is drawn to the fact that the use of the associated protocol type is restricted by its intellectual-property-right holders. In all cases, the commitment to limited release of intellectual-property-rights made by the holders of those rights permits a layer protocol type to be used with other layer protocols of the same type, or in other type combinations explicitly authorized by its intellectual-property-right holders.

NOTE Combinations of protocol types are specified in the IEC 61784-1 series and the IEC 61784-2 series.

IEC 61158-6-10 has been prepared by subcommittee 65C: Industrial networks, of IEC technical committee 65: Industrial-process measurement, control and automation. It is an International Standard.

This fifth edition cancels and replaces the fourth edition published in 2019. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

a) integration of time-aware system basic functionality;
b) integration of time-aware network functionality;
c) integration of remote service interface functionality;
d) integration of SFP diagnosis functionality;
e) integration of media redundancy ring interconnection basic functionality.

The text of this International Standard is based on the following documents:

Draft	Report on voting
65C/1204/FDIS	65C/1245/RVD

Full information on the voting for the approval of this International Standard can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/publications.

A list of all the parts of the IEC 61158 series, under the general title *Industrial communication networks – Fieldbus specifications*, can be found on the IEC web site.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under "http://webstore.iec.ch" in the data related to the specific document. At this date, the document will be:

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

IMPORTANT – The 'color inside' logo on the cover page of this publication indicates that it contains colors which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a color printer.

INTRODUCTION

This document is one of a series produced to facilitate the interconnection of automation system components. It is related to other standards in the set as defined by the “three-layer” fieldbus reference model described in IEC 61158-1.

The application protocol provides the application service by making use of the services available from the data-link or other immediately lower layer. The primary aim of this document is to provide a set of rules for communication expressed in terms of the procedures to be carried out by peer application entities (AEs) at the time of communication. These rules for communication are intended to provide a sound basis for development in order to serve a variety of purposes:

– as a guide for implementers and designers;

– for use in the testing and procurement of equipment;

– as part of an agreement for the admittance of systems into the open systems environment;

– as a refinement to the understanding of time-critical communications within OSI.

This document is concerned, in particular, with the communication and interworking of sensors, effectors and other automation devices. By using this document together with other standards positioned within the OSI or fieldbus reference models, otherwise incompatible systems can work together in any combination.

The International Electrotechnical Commission (IEC) draws attention to the fact that it is claimed that compliance with this document may involve the use of a patent. IEC takes no position concerning the evidence, validity, and scope of this patent right.

The holder of these patent rights has assured IEC that s/he is willing to negotiate licences under reasonable and non-discriminatory terms and conditions with applicants throughout the world. In this respect, the statement of the holder of these patent rights is registered with IEC. Information may be obtained from the patent database available at http://patents.iec.ch.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights other than those in the patent database. IEC shall not be held responsible for identifying any or all such patent rights.

INDUSTRIAL COMMUNICATION NETWORKS – FIELDBUS SPECIFICATIONS –

Part 6-10: Application layer protocol specification – Type 10 elements

1 Scope

1.1 General

The Fieldbus Application Layer (FAL) provides user programs with a means to access the fieldbus communication environment. In this respect, the FAL can be viewed as a “window between corresponding application programs”.

This part of IEC 61158 provides common elements for basic time-critical and non-time-critical messaging communications between application programs in an automation environment and material specific to Type 10 fieldbus. The term “time-critical” is used to represent the presence of a time window, within which one or more specified actions are required to be completed with a defined level of certainty. Failure to complete specified actions within the time window risks failure of the applications requesting the actions, with attendant risk to equipment, plant and possibly human life.

This document defines in an abstract way the externally visible behavior provided by the Type 10 fieldbus application layer in terms of:

- the abstract syntax defining the application layer protocol data units conveyed between communicating application entities,
- the transfer syntax defining the application layer protocol data units conveyed between communicating application entities,
- the application context state machine defining the application service behavior visible between communicating application entities, and
- the application relationship state machines defining the communication behavior visible between communicating application entities.

The purpose of this document is to define the protocol provided to:

- define the wire-representation of the service primitives defined in IEC 61158-5-10 and
- define the externally visible behavior associated with their transfer.

This document specifies the protocol of the Type 10 fieldbus application layer, in conformance with the OSI Basic Reference Model (ISO/IEC 7498-1) and the OSI Application Layer Structure (ISO/IEC 9545).

1.2 Specifications

The principal objective of this document is to specify the syntax and behavior of the application layer protocol that conveys the application layer services defined in IEC 61158-5-10.

A secondary objective is to provide migration paths from previously existing industrial communications protocols. It is this latter objective which gives rise to the diversity of protocols standardized in IEC 61158-6.

1.3 Conformance

This document does not specify individual implementations or products, nor does it constrain the implementations of application layer entities within industrial automation systems. Conformance is achieved through implementation of this application layer protocol specification.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

NOTE All parts of the IEC 61158 series, as well as the IEC 61784-1 series and the IEC 61784-2 series are maintained simultaneously. Cross-references to these documents within the text therefore refer to the editions as dated in this list of normative references.

IEEE Std 802.11-2020, *IEEE Standard for Information Technology – Telecommunications and Information Exchange between Systems – Local and Metropolitan Area Networks – Specific requirements – Part 11: Wireless LAN Medium Access Control (MAC) and Physical Layer (PHY) Specifications*

IEEE Std 802.15.1-2005, *IEEE Standard for Information technology – Local and metropolitan area networks – Specific requirements – Part 15.1a: Wireless Medium Access Control (MAC) and Physical Layer (PHY) specifications for Wireless Personal Area Networks (WPAN)*

IETF RFC 768, J. Postel, "User Datagram Protocol", August 1980, available at https://www.rfc-editor.org/info/rfc768 [viewed 2022-10-06]

IETF RFC 791, J. Postel, "Internet Protocol", September 1981, available at https://www.rfc-editor.org/info/rfc791 [viewed 2022-10-06]

IETF RFC 792, J. Postel, "Internet Control Message Protocol", September 1981, available at https://www.rfc-editor.org/info/rfc792 [viewed 2022-10-06]

IETF RFC 826, D. Plummer, "An Ethernet Address Resolution Protocol: Or Converting Network Protocol Addresses to 48.bit Ethernet Address for Transmission on Ethernet Hardware", November 1982, available at https://www.rfc-editor.org/info/rfc826 [viewed 2022-10-06]

IETF RFC 1034, P.V. Mockapetris, "Domain names – concepts and facilities", November 1987, available at https://www.rfc-editor.org/info/rfc1034 [viewed 2022-10-06]

IETF RFC 1213, K. McCloghrie, M. Rose, "Management Information Base for Network Management of TCP/IP-based internets: MIB-II", March 1991, available at https://www.rfc-editor.org/info/rfc1213 [viewed 2022-10-06]

IETF RFC 2131, R. Droms, "Dynamic Host Configuration Protocol", March 1997, available at https://www.rfc-editor.org/info/rfc2131 [viewed 2022-10-06]

IETF RFC 2132, S. Alexander, R. Droms, "DHCP Options and BOOTP Vendor Extensions", March 1997, available at https://www.rfc-editor.org/info/rfc2132 [viewed 2022-10-06]

IETF RFC 2236, W. Fenner, "Internet Group Management Protocol, Version 2", November 1997, available at https://www.rfc-editor.org/info/rfc2236 [viewed 2022-10-06]

IETF RFC 2365, D. Meyer, "Administratively Scoped IP Multicast", July 1998, available at https://www.rfc-editor.org/info/rfc2365 [viewed 2022-10-06]

IETF RFC 2474, K. Nichols, S. Blake, F. Baker, D. Black, "Definition of the Differentiated Services Field (DS Field) in the IPv4 and IPv6 Headers", December 1998, available at https://www.rfc-editor.org/info/rfc2474 [viewed 2022-10-06]

IETF RFC 2475, S. Blake, D. Black, M. Carlson, E. Davies, Z. Wang, W. Weiss, "An Architecture for Differentiated Services"*;* December 1998, available at https://www.rfc-editor.org/info/rfc2475 [viewed 2022-10-06]

IETF RFC 2674, E. Bell, A. Smith, P. Langille, A. Rijhsinghani, K. McCloghrie, "Definitions of Managed Objects for Bridges with Traffic Classes, Multicast Filtering and Virtual LAN Extensions", August 1999, available at https://www.rfc-editor.org/info/rfc2674 [viewed 2022-10-06]

IETF RFC 2863, K. McCloghrie, F. Kastenholz, "The Interfaces Group MIB", June 2000, available at https://www.rfc-editor.org/info/rfc2863 [viewed 2022-10-06]

IETF RFC 3418, R. Presuhn, Ed., "Management Information Base (MIB) for the Simple Network Management Protocol (SNMP)", December 2002, available at https://www.rfc-editor.org/info/rfc3418 [viewed 2022-10-06]

IETF RFC 3535, Schoenwaelder, J., *Overview of the 2002 IAB Network Management Workshop*, May 2003, https://www.rfc-editor.org/info/rfc3535 [viewed 2022-10-21]

IETF RFC 3621, A. Berger, D. Romascanu, "Power Ethernet MIB", December 2003, available at https://www.rfc-editor.org/info/rfc3621 [viewed 2022-10-06]

IETF RFC 4361, T. Lemon, B. Sommerfeld, "Node-specific Client Identifiers for Dynamic Host Configuration Protocol Version Four (DHCPv4)", February 2006, available at https://www.rfc-editor.org/info/rfc4361 [viewed 2022-10-06]

IETF RFC 4363, D. Levi, D. Harrington, "Definitions of Managed Objects for Bridges with Traffic Classes, Multicast Filtering, and Virtual LAN Extensions", January 2006, available at https://www.rfc-editor.org/info/rfc4363 [viewed 2022-10-06]

IETF RFC 4604, H. Holbrook, B. Cain, B. Haberman, "Using Internet Group Management Protocol Version 3 (IGMPv3) and Multicast Listener Discovery Protocol Version 2 (MLDv2) for Source-Specific Multicast", August 2006, available at https://www.rfc-editor.org/info/rfc4604 [viewed 2022-10-06]

IETF RFC 4632, V. Fuller, T. Li, "Classless Inter-domain Routing (CIDR): The Internet Address Assignment and Aggregation Plan", August 2006, available at https://www.rfc-editor.org/info/rfc4632 [viewed 2022-10-06]

IETF RFC 4836, E. Beili, "Definitions of Managed Objects for IEEE Std 802.3 Medium Attachment Units (MAUs)", April 2007, available at https://www.rfc-editor.org/info/rfc4836 [viewed 2022-10-06]

IETF RFC 4949, R. Shirey, " Internet Security Glossary, Version 2", August 2007, available at https://www.rfc-editor.org/info/rfc4949 [viewed 2022-10-06]

IETF RFC 5227, S. Cheshire, "IPv4 Address Conflict Detection", July 2008, available at https://www.rfc-editor.org/info/rfc5227 [viewed 2022-10-06]

IETF RFC 5277, Chisholm, S. and H. Trevino, *NETCONF Event Notifications*, July 2008, https://www.rfc-editor.org/info/rfc5277 [viewed 2022-10-21]

IETF RFC 5539, Badra, M., *NETCONF over Transport Layer Security (TLS)*, May 2009, https://www.rfc-editor.org/info/rfc5539 [viewed 2022-10-21]

IETF RFC 5890, J. Klensin, "Internationalized Domain Names for Applications (IDNA): Definitions and Document Framework", August 2010, available at https://www.rfc-editor.org/info/rfc5890 [viewed 2022-10-06]

IETF RFC 5905, D. Mills, J. Martin, Ed., J. Burbank, W. Kasch, "Network Time Protocol Version 4: Protocol and Algorithms Specification", June 2010, available at https://www.rfc-editor.org/info/rfc5905 [viewed 2022-10-06]

IETF RFC 6020, Bjorklund, M., Ed., *YANG – A Data Modeling Language for the Network Configuration Protocol (NETCONF)*, October 2010, https://www.rfc-editor.org/info/rfc6020 [viewed 2022-10-21]

IETF RFC 6021, Schoenwaelder, J., Ed., *Common YANG Data Types*, October 2010, https://www.rfc-editor.org/info/rfc6021 [viewed 2022-10-21]

IETF RFC 6087, Bierman, A., *Guidelines for Authors and Reviewers of YANG Data Model Documents*, January 2011, https://www.rfc-editor.org/info/rfc6087 [viewed 2022-10-21]

IETF RFC 6110, Lhotka, L., Ed., *Mapping YANG to Document Schema Definition Languages and Validating NETCONF Content*, February 2011, https://www.rfc-editor.org/info/rfc6110 [viewed 2022-10-21]

IETF RFC 6151, S. Turner, L. Chen, "Updated Security Considerations for the MD5 Message-Digest and the HMAC-MD5 Algorithms", March 2011, available at https://www.rfc-editor.org/info/rfc6151 [viewed 2022-10-06]

IETF RFC 6241, Enns, R., Ed., Bjorklund, M., Ed., Schoenwaelder, J., Ed., and A. Bierman, Ed., *Network Configuration Protocol (NETCONF)*, June 2011, https://www.rfc-editor.org/info/rfc6241 [viewed 2022-10-21]

IETF RFC 6243, Bierman, A. and B. Lengyel, *With-defaults Capability for NETCONF*, June 2011, https://www.rfc-editor.org/info/rfc6243 [viewed 2022-10-21]

IETF RFC 6244, Shafer, P., *An Architecture for Network Management Using NETCONF and YANG*, June 2011, https://www.rfc-editor.org/info/rfc6244 [viewed 2022-10-21]

IETF RFC 6470, Bierman, A., *Network Configuration Protocol (NETCONF) Base Notifications*, February 2012, https://www.rfc-editor.org/info/rfc6470 [viewed 2022-10-21]

IETF RFC 6536, Bierman, A. and M. Bjorklund, *Network Configuration Protocol (NETCONF) Access Control Model*, March 2012, https://www.rfc-editor.org/info/rfc6536 [viewed 2022-10-21]

IETF RFC 6890, M. Cotton, L. Vegoda, R. Bonica, Ed., B. Haberman, "Special-Purpose IP Address Registries", April 2013, available at https://www.rfc-editor.org/info/rfc6890 [viewed 2022-10-06]

IETF RFC 6918, F. Gont, C. Pignataro, "Formally Deprecating Some ICMPv4 Message Types", April 2013, available at https://www.rfc-editor.org/info/rfc6918 [viewed 2022-10-06]

IETF RFC 8342, Bjorklund, M., Schoenwaelder, J., Shafer, P., Watsen, K., and R. Wilton, *Network Management Datastore Architecture (NMDA)*, March 2018, https://www.rfc-editor.org/info/rfc8342 [viewed 2022-10-21]
