This document supersedes EN 13523-8:2017.

EN 13523-8:2024 includes the following significant technical changes with respect to EN 13523-8:2017:

- a) the distance between the two scribes has been changed from 10 mm to 20 mm, to be in line with other standards on salt spray fog tests;
- b) the width of the scribe has been changed from at least “0,2 mm” to “0,2 mm to 1,0 mm”;
- c) the text has been editorially revised and the normative references have been updated.

The EN 13523 series, *Coil coated metals — Test methods*, consists of the following parts:

1 Scope

This document specifies the procedures for determining the resistance to salt spray (fog) of an organic coating on a metallic substrate (coil coating).

For steel, neutral salt spray (fog) is usually used, and for aluminium, acetic acid salt spray (fog).
