------------	--	---

Electricity metering equipment - General requirements, tests and test conditions - Part 31: Product safety requirements and tests

Táto norma obsahuje anglickú verziu európskej normy.
This standard includes the English version of the European Standard.

Táto norma bola oznámená vo Vestníku ÚNMS SR č. 02/25

Obsahuje: EN IEC 62052-31:2024, IEC 62052-31:2024

Oznámením tejto normy sa od 31.12.2027 ruší
STN EN 62052-31 (35 6134) z januára 2017

EUROPEAN STANDARD
NORME EUROPÉENNE
EUROPÄISCHE NORM

EN IEC 62052-31

December 2024

ICS 19.080; 91.140.50

Supersedes EN 62052-31:2016

English Version

Electricity metering equipment - General requirements, tests and test conditions - Part 31: Product safety requirements and tests (IEC 62052-31:2024)

Équipement de comptage de l'électricité - Exigences générales, essais et conditions d'essai - Partie 31: Exigences et essais sur la sécurité de produit (IEC 62052-31:2024)

Wechselstrom-Elektrizitätszähler - Allgemeine Anforderungen, Prüfungen und Prüfbedingungen - Teil 31: Sicherheitsanforderungen und Prüfungen (IEC 62052-31:2024)

This European Standard was approved by CENELEC on 2024-11-29. CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CENELEC member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CENELEC member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Türkiye and the United Kingdom.

EN IEC 62052-31:2024 (E)**European foreword**

The text of document 13/1923/FDIS, future edition 2 of IEC 62052-31, prepared by TC 13 "Electrical energy measurement and control" was submitted to the IEC-CENELEC parallel vote and approved by CENELEC as EN IEC 62052-31:2024.

The following dates are fixed:

- latest date by which the document has to be implemented at national level by publication of an identical national standard or by endorsement (dop) 2025-12-31
- latest date by which the national standards conflicting with the document have to be withdrawn (dow) 2027-12-31

This document supersedes EN 62052-31:2016 and all of its amendments and corrigenda (if any).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CENELEC shall not be held responsible for identifying any or all such patent rights.

Any feedback and questions on this document should be directed to the users' national committee. A complete listing of these bodies can be found on the CENELEC website.

Endorsement notice

The text of the International Standard IEC 62052-31:2024 was approved by CENELEC as a European Standard without any modification.

In the official version, for Bibliography, the following notes have to be added for the standard indicated:

IEC 60060-1:2010	NOTE Approved as EN 60060-1:2010 (not modified)

About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

IEC publications search - webstore.iec.ch/advsearchform

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, ...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: sales@iec.ch.

IEC Products & Services Portal - products.iec.ch

Discover our powerful search engine and read freely all the publications previews, graphical symbols and the glossary. With a subscription you will always have access to up to date content tailored to your needs.

Electropedia - www.electropedia.org

The world's leading online dictionary on electrotechnology, containing more than 22 500 terminological entries in English and French, with equivalent terms in 25 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

A propos de l'IEC

La Commission Electrotechnique Internationale (IEC) est la première organisation mondiale qui élabore et publie des Normes internationales pour tout ce qui a trait à l'électricité, à l'électronique et aux technologies apparentées.

A propos des publications IEC

Le contenu technique des publications IEC est constamment revu. Veuillez vous assurer que vous possédez l'édition la plus récente, un corrigendum ou amendement peut avoir été publié.

Recherche de publications IEC -

webstore.iec.ch/advsearchform

La recherche avancée permet de trouver des publications IEC en utilisant différents critères (numéro de référence, texte, comité d'études, ...). Elle donne aussi des informations sur les projets et les publications remplacées ou retirées.

IEC Just Published - webstore.iec.ch/justpublished

Restez informé sur les nouvelles publications IEC. Just Published détaille les nouvelles publications parues. Disponible en ligne et une fois par mois par email.

Service Clients - webstore.iec.ch/csc

Si vous désirez nous donner des commentaires sur cette publication ou si vous avez des questions contactez-nous: sales@iec.ch.

IEC Products & Services Portal - products.iec.ch

Découvrez notre puissant moteur de recherche et consultez gratuitement tous les aperçus des publications, symboles graphiques et le glossaire. Avec un abonnement, vous aurez toujours accès à un contenu à jour adapté à vos besoins.

Electropedia - www.electropedia.org

Le premier dictionnaire d'électrotechnologie en ligne au monde, avec plus de 22 500 articles terminologiques en anglais et en français, ainsi que les termes équivalents dans 25 langues additionnelles. Egalement appelé Vocabulaire Electrotechnique International (IEV) en ligne.

FOREWORD.....	9
INTRODUCTION.....	12
1 Scope.....	13
1.1 General.....	13
1.2 Aspects included in scope.....	14
1.3 Aspects excluded from scope.....	15
1.4 Verification.....	15
1.5 Environmental conditions	15
1.5.1 Normal environmental conditions	15
1.5.2 Extended environmental conditions	16
1.5.3 Extreme environmental conditions	16
2 Normative references	17
3 Terms and definitions	19
3.1 Equipment and states of equipment	19
3.2 Parts, accessories, and functional elements.....	19
3.3 Quantities	25
3.4 Tests	28
3.5 Safety terms	28
3.6 Insulation	33
3.7 Terms related to switches of metering equipment.....	37
4 Tests	39
4.1 General.....	39
4.2 Type test – sequence of tests	40
4.3 Reference test conditions.....	40
4.3.1 Atmospheric conditions.....	40
4.3.2 State of the equipment.....	41
4.4 Testing in single fault condition.....	44
4.4.1 General	44
4.4.2 Application of fault conditions	44
4.4.3 Duration of tests	47
4.4.4 Conformity after application of fault conditions.....	47
5 Information and marking requirements.....	47
5.1 General.....	47
5.2 Labels, signs and signals	50
5.2.1 General	50
5.2.2 Durability of markings	53
5.3 Information for selection	53
5.3.1 General	53
5.3.2 General information	53
5.3.3 Information specific for meters.....	54
5.3.4 Information specific for stand-alone tariff and load control equipment	54
5.3.5 Information related to LCS.....	54
5.4 General information for installation and commissioning.....	55
5.4.1 General	55
5.4.2 Handling and mounting	55
5.4.3 Enclosure	55

5.4.4	Connections	56
5.4.5	Auxiliary power supply	58
5.4.6	Supply for external devices	58
5.4.7	Self-consumption	59
5.4.8	Commissioning	59
5.5	General information for use	59
5.5.1	General	59
5.5.2	Display, push buttons and other controls	59
5.5.3	Switches	60
5.5.4	Connection to user's equipment	60
5.6	General information for maintenance	60
5.6.1	Maintenance instructions	60
5.6.2	Cleaning	60
5.6.3	Batteries	60
6	Protection against electrical shock	61
6.1	General requirements	61
6.2	Determination of accessible parts	62
6.2.1	General	62
6.2.2	Examination	62
6.2.3	Openings above parts that are hazardous live	63
6.2.4	Openings for pre-set controls	63
6.2.5	Wiring terminals	63
6.3	Limit values for accessible parts	64
6.3.1	General	64
6.3.2	Levels in normal condition	64
6.3.3	Levels in single fault condition	65
6.4	Primary means of protection (protection against direct contact)	67
6.4.1	General	67
6.4.2	Equipment case	68
6.4.3	Basic insulation	68
6.4.4	Impedance	68
6.5	Additional means of protection in case of single fault conditions (protection against indirect contact)	68
6.5.1	General	68
6.5.2	Protective bonding	69
6.5.3	Supplementary insulation and reinforced insulation	72
6.5.4	Protective impedance	73
6.5.5	Automatic disconnection of the supply	73
6.5.6	Current- or voltage-limiting device	73
6.6	Connection to external circuits	74
6.6.1	General	74
6.6.2	Terminals for external circuits	74
6.6.3	Terminals for stranded conductors	74
6.7	Insulation requirements	75
6.7.1	General – electric stresses, overvoltages and working voltages	75
6.7.2	The nature of insulation	78
6.7.3	Insulation requirements for mains circuits	81
6.7.4	Insulation requirements for non-mains circuits	90

6.7.5	Insulation in circuits with special voltage values not addressed in 6.7.3 or 6.7.4.....	97
6.7.6	Reduction of transient overvoltages by the use of overvoltage limiting devices.....	104
6.7.7	Insulation requirements between circuits and parts.....	104
6.8	Constructional requirements for protection against electric shock.....	108
6.8.1	General.....	108
6.8.2	Insulating materials.....	108
6.8.3	Color coding.....	108
6.8.4	Equipment case.....	108
6.8.5	Terminal blocks.....	109
6.8.6	Insulating materials of SCS and LCS.....	109
6.8.7	Terminals.....	110
6.8.8	Requirements for current circuits.....	112
6.9	Safety related electrical tests.....	119
6.9.1	Overview.....	119
6.9.2	Test conditions.....	121
6.9.3	Dielectric test methods.....	123
6.9.4	Dielectric testing on complete equipment.....	126
6.9.5	Dielectric tests on sub-assemblies.....	132
6.9.6	Electrical tests on current circuits of directly connected meters without SCS.....	137
6.9.7	Electrical tests on current circuits of directly connected meters with SCS.....	137
6.9.8	Electrical tests on LCS.....	144
6.9.9	Cemented joints test.....	147
6.9.10	Thermal cycling.....	148
7	Protection against mechanical hazards.....	148
7.1	General.....	148
7.2	Sharp edges.....	148
7.3	Provisions for lifting and carrying.....	149
7.4	Wall mounting.....	149
8	Resistance to mechanical stresses.....	150
8.1	General.....	150
8.2	Spring hammer test.....	150
9	Protection against spread of fire.....	150
9.1	General.....	150
9.2	Eliminating or reducing the sources of ignition within the equipment.....	151
9.3	Containment of fire within the equipment, should it occur.....	151
9.3.1	General.....	151
9.3.2	Construction requirements.....	152
9.4	Limited-energy circuit.....	153
9.5	Overcurrent protection.....	154
10	Equipment temperature limits and resistance to heat.....	154
10.1	Surface temperature limits for protection against burns.....	154
10.2	Temperature limits for terminals.....	155
10.3	Temperatures of internal parts.....	156
10.4	Temperature test.....	158
10.5	Resistance to heat.....	159

10.5.1	Non-metallic enclosures	159
10.5.2	Insulating materials	160
11	Protection against penetration of dust and water	160

INTERNATIONAL ELECTROTECHNICAL COMMISSION

**ELECTRICITY METERING EQUIPMENT –
GENERAL REQUIREMENTS, TESTS AND TEST CONDITIONS –****Part 31: Product safety requirements and tests**

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) IEC draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). IEC takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, IEC had not received notice of (a) patent(s), which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at <https://patents.iec.ch>. IEC shall not be held responsible for identifying any or all such patent rights.

IEC 62052-31 has been prepared by IEC technical committee 13: Electrical energy measurement and control. It is an International Standard.

This second edition cancels and replaces the first edition published in 2015. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- a) Title modified (removed "AC");
- b) Scope modified: Extended scope to 1 000 V AC and 1 500 V DC including DC meters. This has led to many changes in various clauses, in particular in Clause 6; Included transducer-operated meters or meters designed for operation with Low Power Instrument Transformers (LPIT) or sensors; Aligned environmental conditions with those of IEC 62052-11:2020, 1.5.2;
- c) Tests: Several clarifications added;
- d) Information and marking requirements: Table 2 aligned widely with IEC 62052-11:2020; Requirements for batteries added;
- e) Protection against electrical shock: Multiple modifications done in different; Clause 6 re-numbered and re-organized; Requirements for touch currents clarified (6.3.1); Specified, in which cases OVC II (resp. CAT II) and OVC IV (resp. CAT IV) requirements shall be applied (6.7.1.3); Added requirements for working voltages (6.7.1.5) and cemented joints (6.7.2.4.2); Table 7 updated and extended; Flowcharts for electrical tests (Figure 10 and Figure 11) and related test procedures updated;
- f) Protection against spread of fire: Requirements for limited energy circuits updated (9.4);
- g) Equipment temperature limits and resistance to heat: Table 40 modified to include additional insulation classes;
- h) Protection against liberated gases and substances explosion and implosion: Requirements for batteries updated;
- i) Components and sub-assemblies Requirements for surge protective devices (13.5);
- j) Annex B revised;
- k) Annex F revised and new examples added;
- l) Annex K revised (see related changes in 6.7.1.3);
- m) Annex L: Removed Annex L "Overview of Safety Aspects Covered", added new Annex L "Electricity Meters in LVDC Systems";
- n) Annex M: Removed Annex M "Index of Defined Terms" and added new Annex M "Component Standards";
- o) General alignment with IEC 61010-1 AMD2 Ed.3 (CDV in preparation) done where possible, however this standard is still in development;
- p) Temperature and humidity ranges (1.5.1 and 1.5.2) revised.

The text of this International Standard is based on the following documents:

Draft	Report on voting
13/1923/FDIS	13/1926/RVD

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/publications.

A list of all parts of IEC 62052 series, under the general title *Electricity metering equipment – General requirements, tests and test conditions*, can be found on the IEC website.

Future documents in this series will carry the new general title as cited above. Titles of existing documents in this series will be updated at the time of the next edition.

In this document, the following print types are used:

- requirements and definitions: in roman type;
- NOTES: in smaller roman type;
- *conformity and tests: in italic type.*

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn, or
- revised.

IMPORTANT – The "colour inside" logo on the cover page of this document indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

INTRODUCTION

The IEC addresses safety aspects by establishing *basic*, *group* and *product* safety publications.

A *basic safety publication* covers a specific safety-related matter, applicable to many electrotechnical products. It is primarily intended for use by technical committees in the preparation of standards in accordance with the principles laid down in IEC Guide 104 and ISO/IEC Guide 51. It is not intended for use by manufacturers or certification bodies. One of the responsibilities of a technical committee is, wherever applicable, to make use of basic safety publications in the preparation of its publications. The requirements, test methods or test conditions of basic safety publications will not apply unless specifically referred to or included in the relevant publications.

A *group safety publication* covers all safety aspects of a specific group of products within the scope of two or more product technical committees (TCs). Group safety publications are primarily intended to be stand-alone product safety publications but may also be used by TCs as source material in the preparation of their publications.

A *product safety publication* covers all safety aspects of one or more products within the scope of a single product TC.

The objectives of the development of this document are the following:

- to specifically reference and include relevant requirements, test methods or test conditions of relevant basic safety publications so that they become applicable;
- to specifically reference and include – where appropriate, in a modified form – relevant requirements, test methods or test conditions of relevant group safety publications;
- to consider the latest developments in the technology used for the design and manufacture of equipment for electrical energy measurement and control;
- to achieve a uniform approach to product safety throughout the international metering industry.

This *product safety standard* is based on, among others, the following:

- the *basic safety standard* IEC 60664-1:2020, established by TC 109;
- standards from the IEC 60364 series related to electrical installations of buildings, established by TC 64;
- the *group safety standard* IEC 61010-1:2016 established by TC 66;
- the *group safety standard* IEC 62477-1:2022 established by TC 22;
- IEC 60255-27:2023, a *product safety standard* for measuring relays and protection equipment, established by TC 95. These products are similar in their design and to some extent in their use in equipment for electrical energy measurement and control.

To facilitate the use of this document, an integral text has been prepared, with appropriate references to source documents.

Being a product safety standard, this document takes precedence over the group safety standards IEC 61010-1:2016 and IEC 62477-1:2022.

ELECTRICITY METERING EQUIPMENT – GENERAL REQUIREMENTS, TESTS AND TEST CONDITIONS –

Part 31: Product safety requirements and tests

1 Scope

1.1 General

This part of IEC 62052 specifies general safety requirements and associated tests, with their appropriate conditions for type testing of directly connected, transformer-operated or transducer-operated AC and DC electricity meters and load control equipment.

NOTE 1 For other general requirements, such as EMC, dependability, etc., see the relevant IEC 62052 or IEC 62059 standards. For accuracy requirements and other requirements specific to class indices, see the relevant IEC 62053 standards.

This document applies to electricity metering equipment designed to:

- measure and control electrical energy on electrical networks (mains) with voltage up to 1 000 V AC or 1 500 V DC;

NOTE 2 The voltage mentioned above is the line-to-neutral voltage AC RMS or DC derived from nominal voltages. See Table 7.

- have all functional elements, including add-on communication modules, enclosed in, or forming a single meter case with exception of indicating displays;
- operate with integrated displays (electromechanical or static meters);
- operate with detached indicating displays or without an indicating display (static meters only);
- wall-mounted or to be installed in specified matching sockets or racks;
- optionally provide additional functions other than those for measurement of electrical energy.

NOTE 3 Modern electricity meters typically contain additional functions such as measurement of voltage magnitude, current magnitude, power, frequency, power factor, etc.; measurement of power quality parameters; load control functions; delivery, time, test, accounting, and recording functions; data communication interfaces and associated data security functions. The relevant standards for these functions may apply in addition to the requirements of this document. However, the requirements for such functions are outside the scope of this document.

NOTE 4 Product requirements for Power Metering and Monitoring Devices (PMDs) and measurement functions such as voltage magnitude, current magnitude, power, frequency, etc., are covered in IEC 61557-12. However, devices compliant with IEC 61557-12 are not intended to be used as billing meters unless they are also compliant with the IEC 62052-11:2020 and one or more relevant IEC 62053-xx particular requirements (accuracy class) standard.

NOTE 5 Product requirements for Power Quality Instruments (PQIs) are covered in IEC 62586-1. Requirements for power quality measurement techniques (functions) are covered in IEC 61000-4-30. Requirements for testing of the power quality measurement functions are covered in IEC 62586-2.

This document also applies to transducer-operated meters or meters designed for operation with Low Power Instrument Transformers (LPIT) or sensors (as defined in the IEC 61869 series).

NOTE 6 For meters designed for operation with LPITs, only the metering unit is considered a low voltage device. If the LPITs are rated for voltages exceeding 1 000 V AC, or 1 500 V DC, the combination of the metering unit and LPITs is not a low voltage device.

When equipment in scope of this document is designed to be installed in a specified matching socket, then the requirements apply to, and the tests are performed on, equipment installed in its specified matching socket. However, requirements for sockets and inserting / removing the meters from the socket are outside the scope of this document.

This document is also applicable to auxiliary input and output circuits, operation indicators, and test outputs of equipment for electrical energy measurement.

NOTE 7 Some examples include impulse inputs and outputs, control inputs and outputs, energy test outputs, and circuits for meter data exchange.

Equipment used in conjunction with equipment for electrical energy measurement and control may need to comply with additional safety requirements. See also Clause 13.

NOTE 8 Examples are telecommunication modems and customer information units.

This document does not apply to:

- meters rated to operate with voltage exceeding 1 000 V AC, or 1 500 V DC;
- metering systems comprising multiple devices physically remote from one another;
- portable meters;

NOTE 9 Portable meters are meters that are not permanently connected.

- meters used in rolling stock, vehicles, ships and airplanes;
- laboratory and mobile meter test equipment;
- reference standard meters;

NOTE 10 Nominal values, accuracy classes, requirements and test methods for reference standard meters are specified in IEC 62057-1: 2023.

- conventional or low power instrument transformers;

NOTE 11 Safety of conventional power transformers and low power instrument transformers is covered in the IEC 61869 series of standards.

- equipment with solid-state or other non-electromechanical supply and load control switches.

NOTE 12 For components and sub-assemblies, see Clause 13.

The safety requirements of this document are based on the following assumptions:

- metering equipment has been installed correctly;
- metering equipment is used generally by ordinary persons, including meter readers and consumers of electrical energy. In many cases, it is installed in a way that it is freely accessible. Its terminal covers cannot be removed, and its case cannot be opened without removing seals (if present) and using a tool;
- during normal use all terminal covers, covers and barriers providing protection against accessing hazardous live parts are in place;
- for installation, configuration, maintenance and repair it may be necessary to remove terminal cover(s), (a part of) the case or barriers so that hazardous live parts may become accessible. Such activities are performed by skilled persons, who have been suitably trained to be aware of working procedures necessary to ensure safety. Therefore, safety requirements covering these conditions are out of the scope of this document.

1.2 Aspects included in scope

NOTE 1 Subclause 1.2 is based on IEC 61010-1:2016, 1.2.

The purpose of the requirements of this document is to ensure that hazards to the user and the surrounding area are reduced to a tolerable level.

Requirements for protection against particular types of hazards are given in Clauses 6 to 12 as follows:

- a) electrical shock or burn (see Clause 6);
- b) mechanical hazards and stresses (see Clauses 7 and 8);
- c) spread of fire from the equipment (see Clause 9);
- d) excessive temperature (see Clause 10);
- e) penetration of dust and water (see Clause 11);
- f) liberated gases, explosion and implosion (see Clause 12).

Requirements for components and sub-assemblies are specified in Clause 13.

Requirements for protection against hazards arising from reasonably foreseeable misuse are specified in Clause 14.

Risk assessment for hazards or environments not fully covered above is specified in Clause 15.

NOTE 2 Attention is drawn to the existence of additional requirements specified by national authorities responsible for health and safety.

1.3 Aspects excluded from scope

This document does not cover:

- a) performance, reliability or other properties of the equipment not related to safety;
- b) EMC requirements, which are covered by the relevant type testing standards;

NOTE 1 For EMC requirements and test methods, see, IEC 62052-11:2020, IEC 62052-21:2004 and IEC 62055-31:2021.

- c) protective measures for explosive atmospheres (see IEC 60079-0:2017);
- d) functional safety requirements;
- e) effectiveness of transport packaging;
- f) safety requirements of installations.

NOTE 2 The latter is generally subject to national regulation.

1.4 Verification

NOTE This subclause reproduces IEC 61010-1:2016, 1.3.

This document also specifies methods of verifying that the equipment meets the requirements of this document, through inspection, type tests, risk assessment and routine tests. See Clauses 4, 15 and Annex I respectively.

1.5 Environmental conditions

1.5.1 Normal environmental conditions

NOTE 1 This subclause is based on IEC 61010-1:2016, 1.4.

This document applies to metering equipment designed to be safe at least under the following conditions:

- a) indoor use;
- b) altitude up to 2 000 m;

- c) climatic conditions according to IEC 62052-11:2020, 8.2, limit range of operation for indoor use.

NOTE 2 In IEC 62052-11:2020, the limit range of operation for indoor use is specified according to IEC 60721-1:1990, climatic class 3K6. The closest climatic class in IEC 60721-3-3:2019, is class 3K24 defined in Table 1, with low air temperature -25 °C, high air temperature +55 °C, low relative humidity 5 %, and high relative humidity 100 %. However, for special applications other temperature limit ranges of operation are allowed according to purchase contract.

- d) variation in voltage magnitude up to ± 10 % of the nominal voltage. The equipment may have several nominal voltages;
- e) transient overvoltages up to the levels of overvoltage category III;
- f) transient overvoltages occurring on the mains supply (see 6.7.1.1);
- g) applicable pollution degree of the intended environment (pollution degree 2 in most cases).

Manufacturers may specify more restricted environmental conditions for operation; nevertheless, the equipment shall be safe within these normal environmental conditions.

1.5.2 Extended environmental conditions

This document applies to metering equipment designed to be safe not only under the environmental conditions specified in 1.5.1, but also under any of the following conditions for which the equipment is rated by the manufacturer:

- a) outdoor use;
- b) altitude above 2 000 m;
- c) climatic conditions according to IEC 62052-11:2020, 8.2, limit range of operation for outdoor use.

NOTE 1 In IEC 62052-11:2020, the limit range of operation for outdoor use is specified according to IEC 60721-1:1990, climatic class 3K7. The closest climatic class in IEC 60721-3-4:2019, is class 4K23 defined in Table 1, but with low air temperature -40 °C (instead of -45 °C), high air temperature +70 °C, low relative humidity 4 %, and high relative humidity 100 %. However, for special applications other temperature limit ranges of operation are allowed according to purchase contract.

- d) variation in voltage magnitude up to -20...15 % of the nominal voltage;

NOTE 2 See IEC 62368:2018, B 2.3.

- e) rated impulse voltage U_{imp} higher than what is required for overvoltage category III (see 3.3.8).

1.5.3 Extreme environmental conditions

NOTE 1 The following text is based on IEC 60721-3-0:2020, 5.2.

It is recognized that extreme environmental conditions may exist.

Elements determining the environmental conditions may occur with any of their severities in combination with other elements and their respective severities. An assumption that each element may occur with its highest severity would lead to unnecessary overdesign and cost. Therefore, specifications for products to operate under such extreme environmental conditions are a matter for negotiation between the manufacturer and the purchaser.

NOTE 2 For specific climatic conditions, see IEC 60721-3-3:2019.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 60027-1:1992, *Letters symbols to be used in electrical technology – Part 1: General*
IEC 60027-1:1992/AMD1:1997
IEC 60027-1:1992/AMD2:2005

IEC 60068-2-75:2014, *Environmental testing – Part 2-75: Tests – Test Eh: Hammer tests*

IEC 60068-2-78:2012, *Environmental testing – Part 2-78: Tests – Test Cab: Damp heat, steady state*

IEC 60085:2007, *Electrical insulation – Thermal evaluation and designation*

IEC 60112:2020, *Method for the determination of the proof and the comparative tracking indices of solid insulating materials*

IEC 60269-3:2010, *Low-voltage fuses – Part 3: Supplementary requirements for fuses for use by unskilled persons (fuses mainly for household or similar applications) – Examples of standardized systems of fuses A to F*

IEC 60332-1-2:2004, *Tests on electric and optical fiber cables under fire conditions – Part 1-2: Test for vertical flame propagation for a single insulated wire or cable – Procedure for 1 kW pre-mixed flame*

IEC 60332-2-2:2004, *Tests on electric and optical fiber cables under fire conditions – Part 2-2: Test for vertical flame propagation for a single small insulated wire or cable – Procedure for diffusion flame*

IEC 60364-4-44:2007, *Low-voltage electrical installations – Part 4-44: Protection for safety – Protection against voltage disturbances and electromagnetic disturbances*

IEC 60384-14:2023, *Fixed capacitors for use in electronic equipment – Part 14: Sectional specification – Fixed capacitors for electromagnetic interference suppression and connection to the supply mains*

IEC 60417-DB-12M, *Graphical symbols for use on equipment*

IEC 60529:1989, *Degrees of protection provided by enclosures (IP Code)*
IEC 60529:1989/AMD1:1999
IEC 60529:1989/AMD2:2013

IEC 60617-DB-12M, *Graphical symbols for diagrams*

IEC 60664-1:2020, *Insulation coordination for equipment within low-voltage systems – Part 1: Principles, requirements and tests*

IEC 60695-2-11:2021, *Fire hazard testing – Part 2-11: Glowing/hot-wire based test methods – Glow-wire flammability test method for end-products (GWEPT)*

IEC 60695-11-10:2013, *Fire hazard testing – Part 11-10: Test flames – 50 W horizontal and vertical flame test methods*

IEC 60721-3-0:2020, *Classification of environmental conditions – Part 3: Classification of groups of environmental parameters and their severities – Introduction*

IEC 60721-3-3:2019, *Classification of environmental conditions – Part 3-3: Classification of groups of environmental parameters and their severities – Stationary use at weather protected locations*

IEC 60950-1:2005, *Information technology equipment – Safety – Part 1: General requirements*
IEC 60950-1:2005/AMD1:2009
IEC 60950-1:2005/AMD2:2013

IEC 61000-4-5:2014, *Electromagnetic compatibility (EMC) – Part 4-5: Testing and measurement techniques – Surge immunity test*
IEC 61000-4-5:2014/AMD1:2017

IEC 61010-1:2016, *Safety requirements for electrical equipment for measurement, control, and laboratory use – Part 1: General requirements*
IEC 61010-1:2016/AMD1:2016
IEC 61010-1 AMD2 ED. 3 CDV in preparation

IEC 61010-2-030:2017, *Safety requirements for electrical equipment for measurement, control, and laboratory use – Part 2-030: Particular requirements for testing and measuring circuits*

IEC 61032:1997, *Protection of persons and equipment by enclosures – Probes for verification*

IEC 61180:2016, *High-voltage test techniques for low voltage equipment – Definitions, test and procedure requirements, test equipment*

IEC 61851-23:2014, *Electric vehicle conductive charging system – Part 23: DC electric vehicle charging station*

IEC 62052-11:2020, *Electricity metering equipment – General requirements, tests and test conditions – Part 11: Metering equipment*

IEC 62052-31:2015, *Electricity metering equipment (AC) – General requirements, tests and test conditions – Part 31: Product safety requirements and tests*

IEC 62368-1:2018, *Audio/video, information and communication technology equipment – Part 1: Safety requirements*

ISO 75-2:2013, *Plastics – Determination of temperature of deflection under load – Part 2: Plastics and ebonite*

ISO 3864-1:2011, *Graphical symbols, Safety colors and safety signs – Part 1: Design principles for safety signs and safety markings*

ISO 7000:2019, *Graphical symbols for use on equipment – Registered symbols*
