Slovenská technická norma a technická normalizačná informácia je chránená zákonom č. 60/2018 Z. z. o technickej normalizácii v znení neskorších predpisov.

Anotácia

Tento dokument poskytuje návod na vzťah medzi ISO/IEC 20000-1: 2018 a dvoma bežne používanými rámcami, Agile a DevOps. Môže ho použiť akákoľvek organizácia alebo osoba, ktorá chce pochopiť, ako možno Agile a DevOps používať s ISO/IEC 20000-1, vrátane:

- a) organizácie, ktorá preukázala alebo má v úmysle preukázať zhodu s požiadavkami špecifikovanými v ISO/IEC 20000-1 a hľadá usmernenie o používaní Agile alebo DevOps na vytvorenie alebo zlepšenie SMS a služieb;
- b) organizácie, ktorá už používa Agile alebo DevOps a hľadá návod, ako možno Agile alebo DevOps využiť na podporu úsilia o preukázanie zhody s požiadavkami špecifikovanými v ISO/IEC 20000-1;
- c) posudzovateľa alebo audítora, ktorý chce pochopiť používanie Agile alebo DevOps ako podporu pri dosahovaní požiadaviek špecifikovaných v ISO/IEC 20000-1.

Obidva prístupy môžu byť použité nezávisle alebo spoločne. V závislosti od kontextu môže organizácia nasadiť iba agilné rámce, iba rámce DevOps, používať rámce Agile aj DevOps izolované alebo použiť integrovaný pracovný postup s kombinovanými prístupmi Agile a DevOps. V ktorejkoľvek z týchto situácií možno tento dokument použiť ako návod na integráciu postupov Agile a DevOps do SMS.

Usmernenie v tomto dokumente môže pomôcť organizácii pri plánovaní a príprave na posúdenie zhody podľa ISO/IEC 20000-1, pričom treba poznamenať, že organizácia môže uplatniť zhodu len splnením všetkých požiadaviek špecifikovaných v ISO/IEC 20000-1.

Tento dokument je určený na pomoc používateľom pri spájaní požiadaviek špecifikovaných v ISO/IEC 20000-1: 2018 s princípmi a postupmi dvoch často používaných rámcov vývoja softvéru a služieb, Agile a DevOps. Organizácie môžu na toto usmernenie odkazovať ako na krízový odkaz medzi rámcami, ktorý im pomôže plánovať, implementovať a zlepšiť systém riadenia služieb (SMS).

Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives or www.iec.ch/members_experts/refdocs).

ISO and IEC draw attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO and IEC take no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO and IEC had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents and <https://patents.iec.ch>. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see www.iso.org/iso/foreword.html. In the IEC, see www.iec.ch/understanding-standards.

This document was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 40, *IT Service Management and IT Governance*.

A list of all parts in the ISO/IEC 20000 series can be found on the ISO and IEC websites.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html and www.iec.ch/national-committees.

ISO/IEC TS 20000-15:2024(en)

Introduction

This document is intended to assist users in relating the requirements specified in ISO/IEC 20000-1:2018 to the principles and practices of two frequently used software and service development frameworks, Agile and DevOps. Organizations can refer to this guidance as a cross-reference between the frameworks to help them plan, implement and improve a service management system (SMS).

ISO/IEC 20000-1 is the International Standard for service management and specifies requirements which can be used as the basis of a conformity assessment.

ISO/IEC 20000-1 specifies an integrated process approach in which an organization establishes, implements, maintains and continually improves an SMS. The services can be delivered to internal or external customers or a combination of both. Other parts of the ISO/IEC 20000 series provide supporting guidance.

Agile is defined as a collection of frameworks and techniques focusing on collaboration, iterative and incremental development and continuous improvement.

DevOps is defined as a set of principles and practices which enable better communication and collaboration between relevant stakeholders for the purpose of specifying, developing and operating software and systems services, and continuous improvements in all aspects of the lifecycle (ISO/IEC/IEEE 32675).

Despite these definitions being focused on software development, both Agile and DevOps principles have also been used in a much broader sense, including the development and delivery of services.

The DevOps framework is based on the Agile framework, adding automation of service development and delivery to it. Many Agile concepts discussed in this document are therefore equally applicable to DevOps.

Organizations can implement and improve their SMS using the requirements specified in ISO/IEC 20000-1 and the guidance in the other parts of the ISO/IEC 20000 series. An organization can adopt Agile and DevOps practices to support the management of their services in alignment with the requirements specified in ISO/IEC 20000-1. Other frameworks and practices can also be used to support ISO/IEC 20000-1.

Within this document, [Clause 4](#) provides an overview of ISO/IEC 20000-1 and the SMS. [Clause 5](#) applies Agile principles to the SMS. [Clause 6](#) applies DevOps principles to the SMS. In [Clause 7](#), the benefits and caveats surrounding the use of Agile, DevOps or a combination of the two in the SMS are discussed. [Annex A](#) provides a correlation of ISO/IEC 20000-1 clauses to the Agile and DevOps frameworks.

Information technology — Service management —

Part 15: Guidance on the application of Agile and DevOps principles in a service management system

1 Scope

This document provides guidance on the relationship between ISO/IEC 20000-1:2018 and two commonly used frameworks, Agile and DevOps. It can be used by any organization or person wishing to understand how Agile and DevOps can be used with ISO/IEC 20000-1, including:

- a) an organization that has demonstrated or intends to demonstrate conformity to the requirements specified in ISO/IEC 20000-1 and is seeking guidance on the use of Agile or DevOps to establish or improve the SMS and the services;
- b) an organization that already uses Agile or DevOps and is seeking guidance on how Agile or DevOps can be used to support efforts to demonstrate conformity to the requirements specified in ISO/IEC 20000-1;
- c) an assessor or auditor who wishes to understand the use of Agile or DevOps as a support for achieving the requirements specified in ISO/IEC 20000-1.

Both approaches can be used independently or together. Depending on the context, an organization can deploy Agile frameworks only, DevOps frameworks only, use both Agile and DevOps frameworks in isolation, or use an integrated workflow with combined Agile and DevOps approaches. In any of these situations, this document can be used as guidance for the integration of Agile and DevOps practices in an SMS.

The guidance in this document can assist an organization in planning and preparing for a conformity assessment against ISO/IEC 20000-1, noting that an organization can only claim conformity by fulfilling all requirements specified in ISO/IEC 20000-1.
