------------	--	---

Explosive atmospheres - Part 19: Equipment repair, overhaul and reclamation

Táto norma obsahuje anglickú verziu európskej normy.
This standard includes the English version of the European Standard.

Táto norma bola oznámená vo Vestníku ÚNMS SR č. 11/25

Obsahuje: EN IEC 60079-19:2025, IEC 60079-19:2025

Oznámením tejto normy sa od 30.09.2028 ruší
STN EN IEC 60079-19 (33 2320) z júla 2021

141470

Úrad pre normalizáciu, metrológiu a skúšobníctvo Slovenskej republiky, 2025

EN IEC 60079-19

NORME EUROPÉENNE

EUROPÄISCHE NORM

September 2025

ICS 29.260.20

Supersedes EN IEC 60079-19:2019

English Version

**Explosive atmospheres - Part 19: Equipment repair, overhaul
and reclamation
(IEC 60079-19:2025)**

Atmosphères explosives - Partie 19: Réparation, révision et
remise en état de l'appareil
(IEC 60079-19:2025)

Explosionsgefährdete Bereiche - Teil 19: Gerätereparatur,
Überholung und Regenerierung
(IEC 60079-19:2025)

This European Standard was approved by CENELEC on 2025-08-20. CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CENELEC member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CENELEC member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Türkiye and the United Kingdom.

EN IEC 60079-19:2025 (E)**European foreword**

The text of document 31J/386/FDIS, future edition 5 of IEC 60079-19, prepared by SC 31J "Classification of hazardous areas and installation requirements" of IEC/TC 31 "Equipment for explosive atmospheres" was submitted to the IEC-CENELEC parallel vote and approved by CENELEC as EN IEC 60079-19:2025.

The following dates are fixed:

- latest date by which the document has to be implemented at national (dop) 2026-09-30 level by publication of an identical national standard or by endorsement
- latest date by which the national standards conflicting with the (dow) 2028-09-30 document have to be withdrawn

This document supersedes EN IEC 60079-19:2019 and all of its amendments and corrigenda (if any).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CENELEC shall not be held responsible for identifying any or all such patent rights.

Any feedback and questions on this document should be directed to the users' national committee. A complete listing of these bodies can be found on the CENELEC website.

Endorsement notice

The text of the International Standard IEC 60079-19:2025 was approved by CENELEC as a European Standard without any modification.

In the official version, for Bibliography, the following notes have to be added for the standard indicated:

IEC 60034 (series)	NOTE	Approved as EN IEC 60034 (series)
IEC 60364 (series)	NOTE	Approved as HD 60364 (series)
IEC 60079-18	NOTE	Approved as EN 60079-18
IEC/TS 60079-39	NOTE	Approved as CLC IEC/TS 60079-39
IEC/TS 60079-47	NOTE	Approved as CLC IEC/TS 60079-47
ISO 9000	NOTE	Approved as EN ISO 9000
ISO 9001	NOTE	Approved as EN ISO 9001
ISO/IEC 17000	NOTE	Approved as EN ISO/IEC 17000

ISO/IEC 80079-34	NOTE	Approved as EN ISO/IEC 80079-34

Annex ZA (normative)

Normative references to international publications with their corresponding European publications

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

NOTE 1 Where an International Publication has been modified by common modifications, indicated by (mod), the relevant EN/HD applies.

NOTE 2 Up-to-date information on the latest versions of the European Standards listed in this annex is available here: www.cencenelec.eu.

About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

IEC publications search -
webstore.iec.ch/advsearchform

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, ...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished
Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

IEC Customer Service Centre - webstore.iec.ch/csc
If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: sales@iec.ch.

IEC Products & Services Portal - products.iec.ch

Discover our powerful search engine and read freely all the publications previews, graphical symbols and the glossary. With a subscription you will always have access to up to date content tailored to your needs.

Electropedia - www.electropedia.org

The world's leading online dictionary on electrotechnology, containing more than 22 500 terminological entries in English and French, with equivalent terms in 25 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

Warning! Make sure that you obtained this publication from an authorized distributor.

INTERNATIONAL ELECTROTECHNICAL COMMISSION

**Explosive atmospheres -
Part 19: Equipment repair, overhaul and reclamation****FOREWORD**

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) IEC draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). IEC takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, IEC had not received notice of patent(s), which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at <https://patents.iec.ch>. IEC shall not be held responsible for identifying any or all such patent rights.

IEC 60079-19 has been prepared by Subcommittee 31J: Classification of hazardous areas and installation requirements of IEC Technical Committee 31: Equipment for explosive atmospheres. It is an International Standard.

This fifth edition cancels and replaces the fourth edition published in 2019. This edition constitutes a technical revision.

Users of this document are advised that interpretation sheets clarifying the interpretation of this document can be published. Interpretation sheets are available from the IEC webstore and can be found in the "history" tab of the page for each document.

IEC 60079-19:2025 © IEC 2025

The significance of changes between IEC 60079-19, Edition 5 (2025) and IEC 60079-19, Edition 4 (2019) are as listed below:

Explanation of the significance of changes	Clause	Type		
		Minor and editorial changes	Extension	Major technical changes
Reference to IEC 60079 series moved before IEC 60034 series	Introduction	X		
Scope restructured and reworded to clarify Scope of this document and align with other TC31 standards	1	X		
New bullet point clarifying that Ex Components are not repaired	1		X	
Normative references updated to include all standards referenced in the text	2	X		
For Terms, with this document as the source document, as identified in IEC 60050-426:2020 as 426-15-xx the source reference has been omitted from this document since this document is the source	3	X		
New Terms related to certificates, to group related terms	3.2	X		
Term certificate, amended to align with new IEC 60079-0. Former definitions 3.2.1 and 3.2.2 deleted, these are defined in IEC 60079-0, in this document remaining definitions become 3.2.1 and 3.2.2	3.2.1	X		
Term Schedule Drawing, kept even though it is in IEC 60079-0 to maintain connection with related drawings	3.2.2	X		
Note 1 added to term related drawings, to assist manufacturers who consider Schedule Drawings intellectual property not accessible by others	3.2.3		X	
Previous Term 3.27 renumbered and Deprecated Term dust ignition protection "tD" added with amended Note 1	3.6	X		
Previous 3.7 Term flameproof enclosure "d" definition updated to current IEC definition	3.8	X		
Previous 3.8 Term increased safety "e" definition updated to forthcoming IEC 60079-7 Ed 6.0	3.9	X		
Previous 3.9 renumbered and Source updated	3.10	X		
Previous 3.11 with <for explosive atmospheres> added	3.11	X		
Term non-electrical equipment added	3.14	X		
Previous 3.10 renumbered and Term corrected	3.15	X		
Previous 3.17 deleted Deprecated Term "pD" added to 3.19 "p"	3.19	X		
New Term 3.21 qualification <personal> added	3.20		X	
Previous 3.18 renumbered Note deleted now a Term 3.22	3.21	X		
New Term relevant standard added, previously a Note in 3.18 and 3.19	3.22	X		
Previous 3.19 renumbered Note deleted now a Term 3.22	3.23	X		
New Term added Type of Protection "h"	3.27		A1	
New Term added for non-electrical Equipment with method of ignition protection -control of ignition sources "b"	3.27.1		A1	

IEC 60079-19:2025 © IEC 2025

Explanation of the significance of changes	Clause	Type		
		Minor and editorial changes	Extension	Major technical changes
New Term added for non-electrical Equipment with method of ignition protection -constructional safety "c"	3.27.2		A1	
New Term added for non-electrical Equipment with method of ignition protection -liquid immersion "k"	3.27.3		A1	
Previous Term 3.23 amended to align with IEC 60079-0 a new Note was added to change definition when used in IEC 60079-19	3.32	X		
Clauses increased from 15 to 16 for new Type of Protection "h" with method of ignition protection "b", "c" and "k"	4.1.1 Para. 1	X		
Include functional and visual inspection of Ex "m" is the only option to validate the ongoing use of Ex "m"	4.1.1 Para 2		X	
New paragraph to clarify IEC 60079-19 is used in conjunction with IEC 60079 series and other relevant standards such as IEC 60034 series. Clarification of scope requirement	4.1.1 Para. 4		X	
New paragraph related to Ex Components	4.1.1 Para. 3		X	
New paragraph clarifying what are the relevant standards	4.1.1 Para. 4		X	
New paragraph clarifying the requirements for use of related drawings in relation to overhaul and repair	4.1.1 Para. 5		A2	
Clarification of requirement to agree status with user previously in Ed 4, 4.3.2.1 m)	4.1.1 Para. 6		X	
New paragraph clarifying service facility limitations particularly in relation to control systems and packages	4.1.1 Para. 7		A3	
New subclause clarifying related drawings in relation to overhaul and repair formally Clause 4.3.2.4.1	4.1.2		X	
Previous 4.3.2.4.1 3 rd paragraph amended now	4.1.2 Para. 1	X		
Previous 4.3.2.4.1 list a) – J) clarified and renumbered	4.1.2 a)	X		
New EXAMPLES of relevant information for repair added to previous 4.3.2.4.1 b)	4.1.2 e)		X	
New sub-clause Status of equipment after overhaul and repair	4.2		A4	
New paragraph clarifying status of electrical equipment after overhaul and repair	4.2.1 Para. 1		A4	
New paragraph clarifying status of non-electrical equipment after overhaul and repair	4.2.1 Para. 2		A4	
New paragraph clarifying repair to Schedule Drawings should be first option, repair to standards is not permitted when Schedule Drawings are available	4.2.1 Para. 1	X		
New paragraph providing similar guidance for repair of non-electrical equipment	4.2.1 Para. 2		X

NOTE 1 The technical changes referred to include the significance of technical changes in the revised IEC standard, but they do not form an exhaustive list of all modifications from the previous version. More guidance can be found by referring to the Redline version of the standard.

Explanations:

A) Definitions

Minor and editorial changes

- clarification
- decrease of technical requirements
- minor technical change
- editorial corrections

These are changes which modify requirements in an editorial or a minor technical way. They include changes of the wording to clarify technical requirements without any technical change, or a reduction in level of existing requirement.

Extension

- addition of technical options

These are changes which add new or modify existing technical requirements, in a way that new options are given, but without increasing requirements from the previous standard.

Major technical changes

- addition of technical requirements
- increase of technical requirements

IEC 60079-19:2025 © IEC 2025

These are changes to technical requirements (addition, increase of the level or removal) made in a way that an overhaul or repair of product to the preceding edition will not always be able to fulfil the requirements given in the later edition. For these changes additional information is provided in clause B) below.

NOTE 2 These changes represent current technological knowledge. However, these changes do not normally have an influence on equipment already placed on the market.

B) Information about the background of 'major technical changes'

- A1 Non-electrical equipment has been repaired using IEC 60079-19 Clause 4 since edition 2 was published in 2006. With the introduction of the ISO 80079-36 and ISO 80079-37 there has been a need to clarify repair requirements for Ex Equipment certified to these standards. The Term Type of Protection "h" will be in the 2nd edition of ISO 80079-36 and the Terms "c", "b" and "k" as methods of ignition protection for non-electrical equipment will be in the 2nd edition of ISO 80079-37. A new Clause 16 has been introduced to provide guidance for Type of Protection "h".
- A2 Many manufacturers consider Schedule Drawings to be proprietary information which they will not provide to other organisations. Schedule Drawings include related drawings referenced within the Schedule Drawings, which can relate to specific constructional detailed of parts of their equipment which can impact on the compliance with the Type of Protection requirements. A NOTE has been added to IEC 60050-426:2020, 426-04-44 to state that for this document related drawings can be used to provide the information necessary to ensure the Ex Equipment being, installed, inspected, maintained, overhauled or repaired remains in compliance with the Type of Protection requirements and the Schedule Drawings.
- A3 This document does not permit service facilities to take on the role of a manufacturer and populate Ex Component Certified enclosures or assemble Ex Equipment into packages, other IEC 60079 series of standards apply for these activities.
- A4 Previous editions of this document had provided information on the different status of Ex Equipment being overhauled and repaired, however it was not in one clause but scatted across different parts of Clause 4. General. In this document we have placed these requirements in a new subclause at the beginning of Clause 4.
- A5 The participation of service facilities overhauling and repairing legacy equipment is clarified as is their participation in a fitness for purpose assessment conducted by the equipment user to the requirements of IEC 60079-17.
- A6 Previous editions of this document have detailed requirements for overhaul, repair and reclamation in Clause 4, however the presentation of this information was open to different interpretation of these requirements. This edition presents these requirements in a more logical way and has introduced this flowchart to clarify these existing requirements.
- A7 The introduction to Annex C needed more detail to help users understand this requirement better.
- A8 According to IEC 60079-0, symbol "X" Specific Conditions of Use can include a statement that for Ex "d" enclosures or electric machine has been constructed with reduced flamepath gaps. However, the Specific Conditions of Use might not provide the gap values required to inspect or repair the equipment and manufacturers might not make this information available to service facilities. When this circumstance occurs Table C.1 and Figure C.1 fail. The table and figure have been amended to provide a solution when this occurs.
- A9 Table C.1 and Figure C.1 required amendment to clarify step 6 in Table C.1. As a result Table C.1 and Figure C.1 were amended to include a new step specifically to clarify how Group IIB+H₂ and Group IIC equipment is treated and in the final step it is made clear that this only applies to Group IIA and Group IIB equipment.

The text of this International Standard is based on the following documents:

Draft	Report on voting
31J/386/FDIS	31J/390/RVD

Full information on the voting for the approval of this International Standard can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/publications.

A list of all parts in the IEC 60079 series, published under the general title *Explosive atmospheres*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn, or
- revised.

IEC 60079-19:2025 © IEC 2025

INTRODUCTION

When equipment is installed in areas where dangerous concentrations and quantities of flammable gases, vapours or dusts might be present in the atmosphere, protective measures are applied to reduce the likelihood of explosion due to ignition by arcs, sparks or hot surfaces produced either in normal operation or under specified fault conditions.

This part of IEC 60079 is supplementary to the IEC 60079 series of standards and other relevant IEC standards for the design requirements of electrical equipment, for example for rotating electric machines the appropriate parts of the IEC 60034 series, in particular IEC 60034-23, which details the comprehensive requirements for overhaul and repair of rotating electric machines.

The nature of the explosion protection offered by each Type of Protection varies according to its unique features.

This document gives guidance on the practical means of maintaining the explosion protection of repaired equipment. This document also defines procedures for repair, overhaul or reclamation and verification of continued compliance of the equipment with the provisions of the Ex Equipment certificate or with the provisions of the appropriate explosion protection standard where an Ex Equipment certificate is not available.

It is intended that the users utilize the most appropriate service facilities for any particular item of equipment, whether they be the facilities of the manufacturer or a suitably competent and equipped repairer.

This document recognizes the necessity of a required level of competence for the repair, overhaul and reclamation of the equipment. Manufacturers may recommend that the equipment be repaired only by them.

Much of the content of this document is concerned with the repair and overhaul of electric machines. This is because they are items of repairable Ex equipment in which, irrespective of the Type of Protection involved, sufficient commonality of construction exists as to make possible more detailed instructions for their repair, overhaul, reclamation or modification.

IEC 60079-19:2025 © IEC 2025

1 Scope

This part of IEC 60079 applies to service facilities and covers only those factors related to overhaul, repair or reclamation of Ex Equipment specifically designed for hazardous areas, where the hazard is caused by explosive atmospheres. Ex Equipment can be overhauled, repaired or reclaimed to mitigate deficiencies identified during operation, inspection and maintenance.

NOTE 1 Service facilities can include users, manufacturers and third party repairers.

It does not include:

- advice on cable and wiring systems which can require a renewal when the equipment is re-installed;
- Repair or overhaul of Type of Protection "m";
- Repair or overhaul of Ex Components;
- Requirements for manufacturers who overhaul and repair equipment which they have manufactured.

NOTE 2 Manufacturers who overhaul and repair equipment which they have manufactured might want to take into consideration the principles in this document with respect to marking and user records for the user's verification records.
