1	Modification to the European foreword	3
2	Modification to 5.2.1.1 (under 5.2.1 Plate clamps).....	3

1 Modification to the European foreword

Add the following two paragraphs:

“This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by December 2025, and conflicting national standards shall be withdrawn at the latest by December 2025.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN shall not be held responsible for identifying any or all such patent rights.”.

2 Modification to 5.2.1.1 (under 5.2.1 Plate clamps)

Replace:

"**A1**) Vacuum lifters shall be dimensioned to hold at least a load corresponding to two times the working load limit at the end of the working range and the beginning of the danger range respectively at all design angles of tilt. The design angles of tilt shall exceed the working angles in accordance with 5.1.2.3.

The pressure range with which it is possible to work is termed the working range. The danger range adjoins the working range. In some vacuum lifting systems, in particular self-priming vacuum lifters, the pressure decrease arising depends upon the weight of the load. **A1**"

with:

"**AC**) Under the conditions specified by the manufacturer, it shall not be possible to unintentionally release the load, in particular by the following influences:

- a) contact of the plate clamp particularly the locking mechanisms with an obstacle;
- b) weight of the crane hook, bottom block or other connections bearing down on the device;
- c) intended tipping and/or turning. **AC**".
